FIDIA 

New nC19 Numerical Control

Fidia presents the new **nC19** ACL enhanced numerical control.

A CN that combines a high level of quality with the compactness of the design while benefiting from all the Fidia technology, including the new adaptive ACL logic.

 Low energy consumption design

Versatile and Compact

Designed to be extremely compact and versatile, it adopts a newly designed physical keyboard and push-button panel that increase its usability and ergonomics, as well as an 18.5" wide P-CAP multi-touch full HD screen.

A product designed to equip the Fidia range but not only, in fact the versatility and practicality of use make it very suitable for carrying out retrofit actions on existing machines or as NC for OEM machine manufacturers who want to offer a product on the market with an excellent quality/price ratio.

Superior performance

The ACL (Adaptive Control Logic) allows for superior performance, increasing machine performance by more than 30% in roughing phases and optimizing tool life. Chattering Reduction System (CRS) and the ability to take advantage of ACL logic to control non-standard production variables, CPM (Custom Parameters Management), are standard.
