Dear School Administrator,

Have you ever found it challenging to find a teacher who not only understands rigorous academic content, but also knows how to engage diverse learners in meaningful, real-world instruction?

As a seasoned educator with experience across K–12, adult education, and corporate training environments, I've learned that lasting educational impact happens when instruction goes beyond textbooks—when it connects with the learner's purpose, abilities, and potential. I hold an active Tennessee Practitioner license with endorsement code 128 (Earth Science 6–12), and I specialize in designing learning experiences that inspire and equip students for success—whether they are at-risk youth or adult learners returning to the classroom.

In my role as a special education teacher, I developed and implemented IEPs tailored to students with diverse needs, including Autism and cerebral palsy. I've also tutored struggling students to improve standardized test outcomes and created adult learning environments that foster growth and dignity. My leadership experience in corporate and policy roles has further honed my ability to align instruction with measurable outcomes—leveraging tools like analysis and research-backed methods to drive continuous improvement.

If your school is seeking an adaptable educator who brings both innovation and empathy to the classroom, I would welcome the opportunity to learn more about your current goals. What priorities are top of mind for your school this semester—and how might a teacher with cross-sector experience help you advance them?

Thank you for considering my application. I'd be glad to connect at your convenience.

Warm regards,

Dr. Daniel T. Lewis
