

Public Water Supply District No. 10 of Cass County

Lead Service Line Inventory – Customer Survey

The Federal Government recently mandated that Community Water Suppliers (CWS) must determine where lead service line materials are located throughout our community. PWSD #10's water mains and district service lines are lead-free. However, PWSD #10 is required to survey, inventory, and report to the state, the type of material(s) used for all district owned and private water service lines within our distribution system. Your participation in completing this survey is a necessary and important step in protecting your community's water quality and is greatly appreciated. Please complete the brief survey below and return to our office. For your convenience you have the option to submit the survey online at <https://www.pwsd10cass.com>.

Contact Information
