

THROUGH - HOLE SOLDERING

This one-day course is geared toward the student with limited knowledge of electronic assembly and soldering. It is also a good preparatory course for those needing J-STD-001 certification having no prior solder skills.

Material in this 1-day course of lecture and hands-on workmanship practice consists of:

- Measurement
- Component identification
- Reference designators
- Printed Circuit Boards
- Solder
- Flux
- Tools and equipment
- Component prepping and installation
- Soldering techniques using a soldering iron
- Rework of solder joints

This course can be customized to meet your company's specific needs

Upon completion student will receive a certificate of accomplishment from Conformance Technologies.
