

 **BURSTDR™**  
STIMULATION

naturally  
**SUPERIOR**

ST. JUDE MEDICAL

# IS ONLY TREATING THE PAIN ENOUGH?

**BurstDR™ stimulation,\* exclusively from St. Jude Medical,** is a proven technology inspired by nature<sup>1</sup> that advances neurostimulation therapy by treating the whole patient. Not only does BurstDR stimulation offer your patients superior pain relief over tonic stimulation, it also relieves the suffering<sup>†</sup> associated with their chronic pain.<sup>2,3</sup>

## A BETTER RESPONSE, NATURALLY.

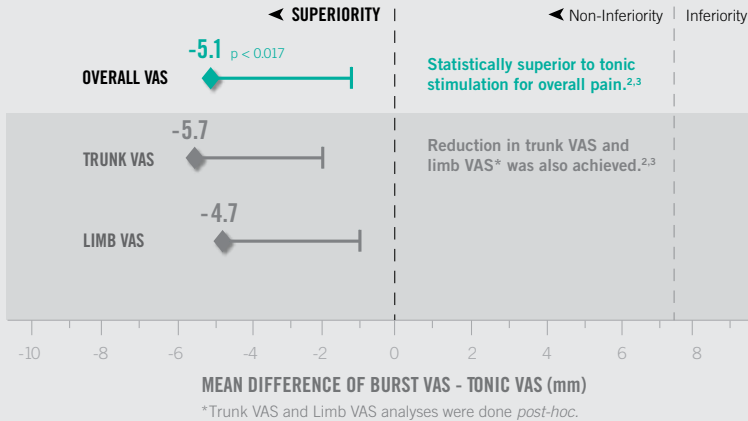

**By emulating natural firing patterns in the brain,** BurstDR stimulation is believed to effectively modulate both the sensory and emotional pathways in the brain—**giving your patients relief from both the pain and the suffering<sup>†</sup> associated with the pain.**<sup>1,4,5</sup>

<sup>†</sup>Pain and suffering as measured by VAS.

## SUPERIOR RELIEF FROM PAIN AND SUFFERING.†

Available only from **St. Jude Medical**, BurstDR stimulation has been proven to provide superior pain relief from overall pain and a reduction in back and leg pain compared to tonic.<sup>2,3</sup>

Non-inferiority primary endpoint met.

## INVISIBLE THERAPY™ FOR A BETTER PATIENT EXPERIENCE.

The Proclaim Elite™ SCS System—along with BurstDR™ stimulation—offers your patients the advantages of Invisible Therapy™, allowing patients to focus on their lives instead of their pain, through:

- A recharge-free device
- Reduced or no paresthesia<sup>2,3</sup>
- Familiar Bluetooth® wireless technology and Apple™ mobile digital devices
- Full-body MR Conditional Labeling†

†Within approved parameters.

MAKE THE **NATURALLY SUPERIOR CHOICE.**

#### Rx Only

**Brief Summary:** Prior to using these devices, please review the Instructions for Use for a complete listing of indications, contraindications, warnings, precautions, potential adverse events and directions for use.

**Indications for Use:** Spinal cord stimulation as an aid in the management of chronic, intractable pain of the trunk and/or limbs, including unilateral or bilateral pain associated with the following: failed back surgery syndrome and intractable low back and leg pain. **Contraindications:** Patients who are unable to operate the system or who have failed to receive effective pain relief during trial stimulation. **Warnings/Precautions:** Diathermy therapy, implanted cardiac systems, magnetic resonance imaging (MRI), explosive or flammable gases, theft detectors and metal screening devices, lead movement, operation of machinery and equipment, postural changes, pediatric use, pregnancy, and case damage. Patients who are poor surgical risks, with multiple illnesses, or with active general infections should not be implanted. **Adverse Effects:** Painful stimulation, loss of pain relief, surgical risks (e.g., paralysis). Clinicians manual must be reviewed for detailed disclosure.
