### CERAMIC DIFFUSER COINS

#### USED AS AN AROMA DIFFUSER

Just Add a drop of essential oil on it! The surrounding air will become purified and revitalized, instantly turning your space into a sanctuary of ultimate relaxation.

#### CRAFTED WITH NATURAL MATERIAL

It's a Diffuser ceramic that keeps you comfortable and this ceramic is suitable for any space requiring odor control. It's made of natural porous ceramics and fired specially to achieve best purifying powers.

#### ELIMINATE BAD ODOR

Ceramic acts like an air-purifying plant, absorbing and eliminating odor molecules and moisture from the surrounding air.

## AROMA STONE DIFFUSER

*The main material for manufacturing the stone ware mostly is clay and mud from the local area around the kiln area which is sediment from river*

Raw materials used to make a stoneware body are mined from local quarries. The clay contains feldspar, a mineral found in crushed rich, which makes clay malleable and enables it to hold a shape when formed into a vessel. The clay is thoroughly dried before being pounded into small pieces by a machine. Next it is put through a sieve to remove impurities. If the clay is coarse, the process is repeated. Water is added and the clay is soaked until enough liquid has been absorbed to give it a dough-like consistency. Then it is put into a pug mill, mechanical mixer that kneads the clay to remove lumps and air pockets. If air bubbles are left in the clay, the vessel may burst during firing. Next the clay is put into plastic bags and set aside to mature. The epitome of modernity is revealed in this final stage of preparing the clay with the use of plastic.

## OUR CRAFTSMAN

*35 years of experience comes from our generational craftspeople, which compliments the skill and innovation inspired by our younger team members.*

The aroma stone itself does not have any fragrance. It serves as a medium for scent diffusion and is used as a scented tool to release fragrances. It is made from natural minerals or synthetic materials and usually has a porous surface that can absorb and retain liquid fragrances.

Gradually, it releases the aroma, filling the surrounding environment with pleasant scents. Using an aroma stone is straightforward; you just need to drop fragrance essence/essential oil/perfume onto its surface, and the stone will absorb and retain the scent in its tiny pores. Over time, the stone will slowly release the fragrance, which can last for several days or even weeks, depending on the stone's size and the concentration of the fragrance.

Once the aroma from the stone diminishes, you can replenish it by adding more fragrance. Aroma stones provide us with visual and olfactory enjoyment, adding a sense of ritual to our lives. They are perfect for gifting or personal use.

“

*Eco-friendly,  
no flame,  
safe, and  
easy to bring*

M GARDEN aroma stone is a handcrafted stone diffuser made from Thailand.

It emits a delicate aroma from the matte surface with just a few drops of essential oil.

For a refined and sustainable aromatherapy experience.
