Help your employees to reach their learning and career goals by seamlessly

Skill Analysis

Bridging the gap

The skill gap is the difference between the skills a job seeker, candidate or employee has and those they need for the role they're seeking, interviewing for, or hold. It's the great divide between what an employer needs and what an employee can deliver. A skills gap can also occur across a team, department or entire organization when its aggregate skills don't line up with what's needed to drive the business forward. The gap can include technical skills. Companies are currently seeing a major digital and technical skills shortage, many are experiencing a time management and leadership skills shortage. And because an enormous amount of us are still communicating through pixelated rectangles on our computer screens, communication skills are the most important skill for the future. IIAAM not only focuses on technical skills but also helps in building personality development, communication and grooming to enhance overall development of an candidate.

Business Development

For many organizations, the impacts of a widening skills gap are long-term. Having a large skills gap can create added stress, lower the quality of work, slow down employee productivity and create disengagement with your workforce, which leads to issues with retention and cuts into your bottom line.

Your organization could lose millions of dollars if you don't prepare your workforce. To stay in the game and support your growing business, start recognizing and fixing your growing skill gaps.

If you develop internal talent, you can drive success by creating strategic upskilling or reskilling programs using IIAAM learning platform that supports self-directed development

Our Core Team

IIAAM's team is comprised of experts from all over aviation industry with decades of experience and also those aviation enthusiasts who bring in industry experience and a zeal for teaching.

IIAAM recruits skilled aviation professionals and trains them on academic and educational skills required for teaching or mentoring. Thus we create industry experienced trainers and professors to train our students at par with industry requirements/standards
