

COLLABORATIVE ARMS

Lower speeds but no guarding required. The collaborative robots have built in safety to allow human working beside them.

Designed to work with both humans and machines, this robot is the latest in a long line of innovations in automation technology for industrial applications.

Safe and transportable, with built-in vision, this robot allows for quick start-ups and rapid changeovers. Its intuitive software enables the robot to be easily trained to perform almost any task wherever you may need it, freeing your workforce from repetitive tasks and increasing your productivity.

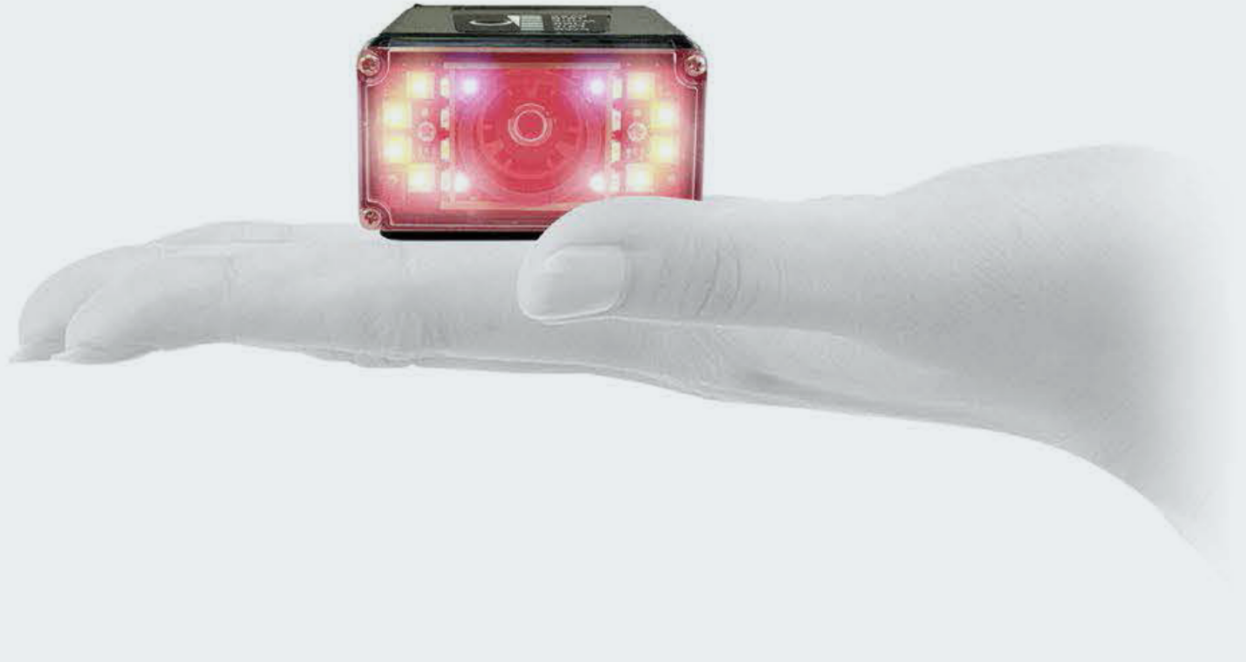

FLEXIBLE FOR YOUR WORKPLACE - Easily switch end effectors to complete any task

PICK AND PLACE
High Speed Flex picker with lower weights and loads. Fully wash down food application available.

DIVERSION SENSORS

Application QA Rejection triggers

LASER SCANNING

Accurate Profiling

3D VISION

Blob Detection, Measurements, Anomalies
