

## - The Custom Waveform Ring Process -

### How long does it take?

I recommend placing an order at least 2 months before your deadline date.

If you would like to set a stone or have engraved on your ring, an additional 10 days will be needed.

If your deadline date is coming sooner, please check with me about a possible production schedule.

### Step1---Send me your sound file

Please let me know your ring size, and how wide your ring would be.

It's okay if you don't know yet.

### -How to record your voice-----

I use the free software [Audacity](#) to record, edit, and visualize sound.

The free version is for a computer.

Many recording/sound editing apps are free and available for your phone.

I found the "Recorder Plus" app is good and you can email your recording to me from the "Export" section. Please contact me if you need any help.

### Step2---Your first design draft and despot payment

You will receive your 1<sup>st</sup> design draft. This is to check if you are satisfied with the sound waveform shape of your ring. If you are not, you can try another recording and send me the new sound file(s).

If you are satisfied with your waveform shape, half of your ring price will be requested as a deposit payment.

### Step3---Size sample rings

To measure the perfect size and best fitting, and also to avoid resizing, I am going to create and mail you 3 brass sample rings.

For example, if you order size 9 and 7mm wide rings of comfort fit, you will receive sizes 8.75, 9, and 9.25 of comfort fit rings to try them on. If you are unsure about the ring width, I can mail the rings of different widths for you to see and choose.

\*There was a case in which none of my sample rings fit the client's finger. This is why measuring your ring size accurately is important. I can make and mail another set but it will cost for additional set (the first set is free) and we lose time.

### - How to measure your ring size-----

The best way to get your ring size is simply to go to your local jeweler to measure.

My ring is at least 5mm wide for the visibility of the sound waveform.

Please ask for a wide-size measuring gauge if available.

If you have any issues to find a local jeweler, please contact me.

- The finger expands a little bit in summer. If you are making your ring in winter,

I recommend NOT making your size fit tight.

---

#### Step4---Your final draft

After I get your best ring size and ring width, I will send you the final draft with accurate dimensions. We will finalize the details such as the waveform opening size and middle line length.

#### Step5---3D printing and casting your ring/ Engraving / stone setting

After your ring is made, I will send you a picture of the ring.  
A stone will be set or the engraving will be done at this point.

Your ring will be shipped after I receive the remaining balance of the ring.

#### -Shipping-----

Final shipping costs will be added to your final bill.  
I can send you the estimate of the shipping cost in advance.

Free shipping service for ordering two rings for a couple.

For domestic shipment, I mail with signature required mail with insurance and tracking number.

For international shipment, I mail with a signature required mail with a tracking number but insurance is optional.

#### -Methods of payment-----

Credit cards (Visa, Master Amex), Paypal, Zelle, Vemmo, a check, and bank wire transfers are accepted. For NY State residents, 8.875% sales tax will be applied.
