

„Parabellum.“

Red Book
of Luger
Values

GENERAL INFORMATION

The sources of data gather in the making of this price guide comes from many collectors / dealer's and some of whom are well known, I have not ask for there permission in using there names and will not. I do acknowledge using the following: The fourteenth edition " BLUE BOOK OF GUN VALUES " by S.P. Fjestad , and " LUGERS AT RANDOM " by Charles Kenyon Jr. as a source of information.

On each model and type you will find four columns referring to percentages of original condition, listed between 98% to a condition less than 90%, or a Luger that has been refinished. In each row you will find in each column two price values the upper value comes from the Blue Book of Gun Values and is distinguish by a " * " , and in the lower comprised of data gather from Lugers for sale over a period of time and averaged out. In some row's you will find the price is under lined which signify that there is no data in which to work with and has been estimated. Also note some variations of Lugers have been omitted do to there rarity.
