3031 W. BURBANK BLVD. BURBANK, CALIFORNIA

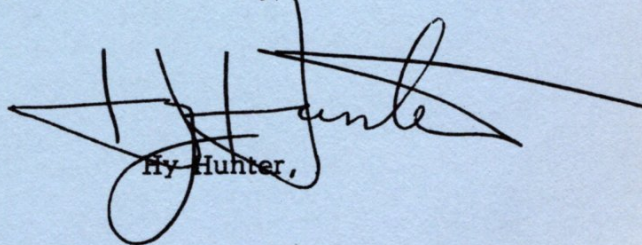

WORTH
A
KINGS
RANSOM. . .

Some time ago we purchased a tremendous case from one of our European agents – looked something like a large coffin. When we finally opened the case here in our Burbank store – we couldn't believe our eyes!

There were almost one thousand German Lugers in that case – every bbl. length and caliber you can imagine. In fact, we doubt if any dealer has ever received such a large quantity of German Lugers! We have photographed some of these guns and included them in our German Luger List #2. Time does not permit us to include them all so if you don't see what you are looking for – please don't hesitate to write us.

When you order a pistol, don't forget to sign the security statement on the order blank. If you don't have the cash, you may take advantage of our EASY PAYMENT PLAN.

Sincerely,

Hy Hunter,

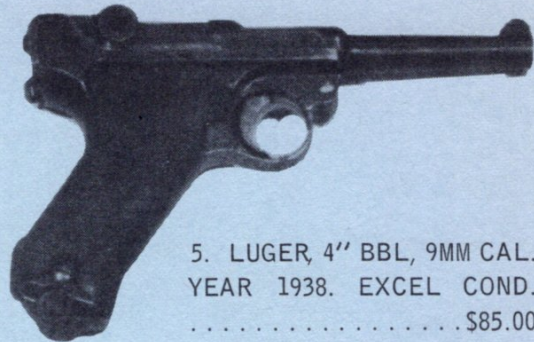

GENUINE LUGERS

NOW YOU MAY HAVE THE PLEASURE OF FIRING YOUR FAVORITE LUGER ECONOMICALLY WITH INEXPENSIVE 22 CAL. SHELLS.

SPECIAL LOW PRICE... \$39.50

Revolutionary
New Principle!

HY HUNTER'S

CARBO-JET GAS PISTOL

Dear Friend:

For many years I have felt that conventional handguns were on the way out. The firearms industry has not changed the manner in which a bullet is fired in almost a hundred years. The manufacture of ammunition as we know it today is a great waste. Walk into any Sporting Goods or Gun Store and you will see hundreds of boxes of different kinds of ammunition. All of them different calibers, different loads and all of them in a very few years will be totally unreliable because the powder changes structure with the passing of time and atmospheric pressure.

The new power of the coming generation will be GAS. No longer will you see a machine gunner in the Army rushing to position with hundreds of pounds of ammunition. No longer will there have to be tons and tons of explosives stored in this country and shipped to combat zones. No longer will the government have to destroy millions of dollars worth of ammunition that they manufactured because it's a few years old and unreliable.

Yes, I predict that in a very short time conventional guns firing shells as we know them today will be antiquated. All of our small arms will be using different mixtures of gases that will propel steel or lead projectiles at tremendous rates of speed. I feel that most of the larger weapons and cannons will be electronically controlled containing Atomic warheads of tremendous power.

I have had my engineers and research developers working on a new idea of a CARBO-JET pistol for many years.

The pistol I felt should be balanced as in the style of the old German Luger. Anybody that has fired the German Luger will remember that the feel and pointing ability is without parallel. This pistol should have target adjustable sights, beautiful trigger pull, slow and crisp with no backlash.

This pistol should have a magazine to hold at least 8 lead .22 caliber round ball shot, a positive firing safety that could be operated easily with the trigger finger.

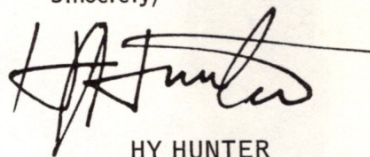

The most important feature was that the power that propelled the projectile was to be some form of GAS and not the old fashioned bullets as we know them today.

My engineers after many years of research and development finally came up with the plans of my brand new CARBO-JET Pistol. It has all of my specifications and others that they developed on their own.

I feel that you will be very pleasantly surprised when you fire your brand new CARBO-JET Pistol. Remember that it's 100% guaranteed to operate perfectly. We send a guaranty card with each pistol. If you are not 100% satisfied with your pistol you may return it to me within 10 days upon receipt and your money will be refunded in full.

Take my advice and order your brand new CARBO-JET Pistol today and you can look forward to many years of shooting pleasure.

Sincerely,

A stylized handwritten signature in black ink, appearing to read 'Hy Hunter'.

HY HUNTER

P.S. FREE! Box of 200 bullets – Hy Hunter's super Carbo-Jet gas cylinder with each pistol purchased.

1

1. REAL GERMAN LUGER FEEL AND APPEARANCE

Here is shown the comparison of the old German Luger and the new Hy Hunter Carbo-Jet Pistol. Notice the similar lines of the two pistols. The Carbo-Jet Pistol was actually designed to give the same overall appearance of the Luger.

SAME BALANCE AS OLD GERMAN LUGER

This original German Luger in the man's hand has the exact same balance as the new Carbo-Jet Pistol.

2

2. TWO PEAS IN A POD . .

You will notice the grip on the German Luger and the new Carbo-Jet Pistol are approximately the same. The weight is the same so you can see in pointing and firing the weapon you have the same beautiful balance as the German Luger. Never before has such a close resemblance been made in such a revolutionary new type of weapon.

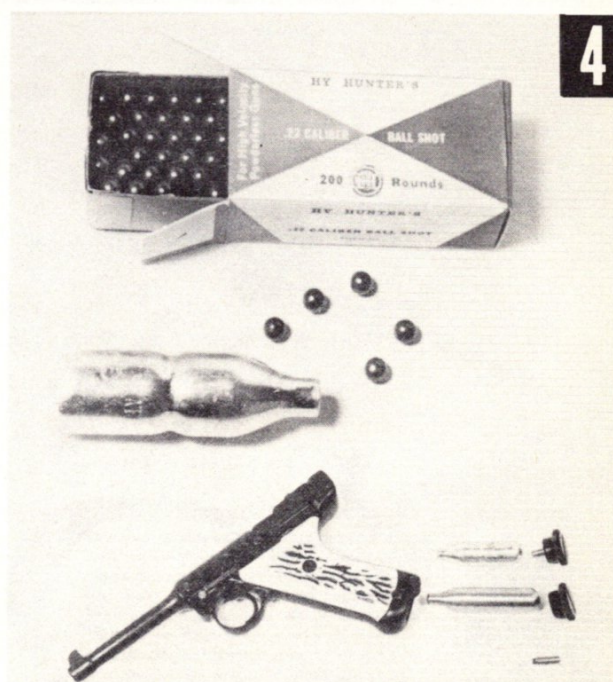

3

3. SPECIAL GAS LOADING KNOB

Notice the large gas loading knob in the butt of this pistol. It is designed so that no screw-driver or coin is needed to screw and unscrew this hand operated knob. All you have to do is unscrew knob and place gas capsules in the butt of the pistol. Then screw until the knob is tight. Always remember to unscrew the knob one full turn after you have inserted a gas capsule. This allows the gas to escape into the firing chamber.

4

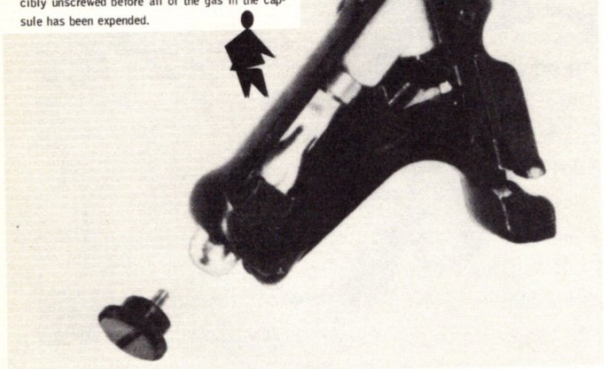

4. CARBO-JET GAS CAPSULE AND .22 CAL. BALL-SHOT

Here is shown the relative size of a Carbo-Jet cartridge. Also, notice the size of the .22 caliber ball-shot. We include free with each pistol purchased one Carbo-Jet Gas Capsule and one box of 200 ball-shot. The Hy Hunter Super Gas Cartridge has been especially designed to contain the maximum power that can be safely metered to the new Carbo-Jet Pistol. Always use the Hy Hunter charge if possible for the best results. However, any standard CO2 cartridge can be used including the Crossman extra large capsule. The small pin on the inside of the gas knob has to be unscrewed to be able to use the large gas capsules. When using small capsules be sure the pin is screwed back in knob. 69c per box of six gas cylinders.

5

5. INTERNAL GAS METER

This is the real heart of the new Hy Hunter "Carbo-Jet" Pistol. Beautifully compact and simply designed for it's purpose. Special safety rubber seal that will automatically discharge gas if gas knob is carelessly unscrewed. This automatic safety device fully protects the shooter from the human element in case the gas cylinder is forcibly unscrewed before all of the gas in the capsule has been expended.

6

Notice Hammer at the rear of the pistol is in a retracted position. Always be sure and put the hammer in backward or in a rear position when loading a new gas capsule. After each shot hammer is pulled back and then pushed forward to a locked position. The "Carbo-Jet" Pistol was designed like this so the shooter would always know when the pistol was cocked and ready to fire. The hammer will stay completely

closed and locked until after the next shot is fired. Then the hammer is pulled back and pushed forward for the next shot. This safety feature is very unusual because in most semi-automatic pistols, the shooter is never able to know whether the Pistol is loaded or not. Also shown is a Hy Hunter "Carbo-Jet" gas capsule and a box of 200, .22 caliber round ball shot ammunition. Remember one capsule and one box of 200 shot are given free with each purchase.

6. SPECIAL COCKING HAMMER

7

7. EIGHT SHOT MAGAZINE

We are looking down at the top of the pistol and can see the eight shot spring magazine. To load the "Carbo-Jet" Pistol Magazine, pull small wire plunger all the way back and slip in the little notch to the left of the magazine. The magazine will hold eight .22 caliber round ball bullets. Then slip the knob out of the notch so it rests against the last bullet. After each shot is fired the spring will automatically go forward and force another bullet in the chamber ready for the next shot. With this unusual design the shooter can always add as many bullets as he desires to fill the magazine and does not have to wait until all of the bullets are fired.

The .22 caliber round balls were made especially for the "Carbo-Jet" Pistol. They are very uniform and when fired from the pistol have tremendous velocity and are extremely accurate. \$1.00 for a box of 200 bullets. Always use the Hy Hunter .22 caliber ball ammunition for best results.

8

8. TRIGGER FINGER SAFETY

The safety is the little knob above and a little forward of the trigger. This fine trigger finger safety is another of the many safety factors that have been incorporated in this beautiful "Carbo-Jet" Pistol. To engage the safety, and if you are holding the pistol in the right hand, point the pistol away from you and push the safety button in with one of the fingers of the left hand. To disengage, and if the pistol is held in the right hand, push the safety in with the trigger finger or index finger. When the pistol is held in the right hand, and the safety button is pushed all the way in, it will fire by pulling the trigger.

9

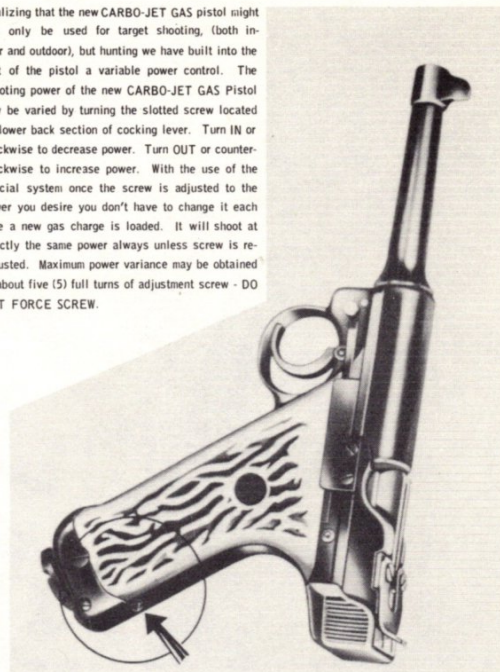

Realizing that some men prefer a soft trigger while others like a hard trigger. The new CARBO-JET Pistol has a specially designed Trigger Pull Adjustment. This adjustment is located directly under the barrel of the pistol at the front of the frame. You will notice two screws. Turn the lower screw IN to reduce travel of trigger to fire. Reverse or out to increase trigger travel and pull. The top screws has nothing to do with the trigger pull and should not be touched.

9. TRIGGER PULL ADJUSTMENT

10

Realizing that the new CARBO-JET GAS pistol might not only be used for target shooting, (both indoor and outdoor), but hunting we have built into the butt of the pistol a variable power control. The shooting power of the new CARBO-JET GAS Pistol may be varied by turning the slotted screw located on lower back section of cocking lever. Turn IN or clockwise to decrease power. Turn OUT or counter-clockwise to increase power. With the use of the special system once the screw is adjusted to the power you desire you don't have to change it each time a new gas charge is loaded. It will shoot at exactly the same power always unless screw is re-adjusted. Maximum power variance may be obtained in about five (5) full turns of adjustment screw - DO NOT FORCE SCREW.

10. VARIABLE POWER CONTROL

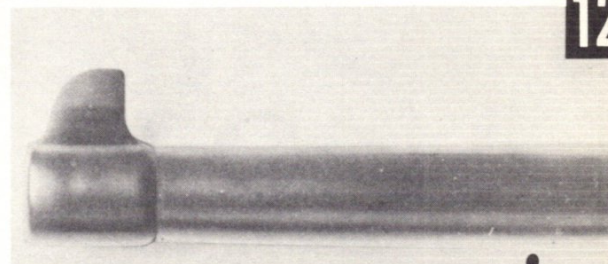

11

11. TARGET ADJUSTABLE SIGHT

The "Carbo-Jet" pistol has a target adjustable sight. Very few low priced pistols have gone this far to give the shooter the very best in a real adjustable sight. The pencil in the photograph is touching the screw that adjusts the elevation of the sight. By screwing up or down you may adjust the elevation to your choice. The two larger screws at the front of the sight adjust the windage. You may unloosen and tighten to adjust the correct windage at any time. With this excellent sight you can hit a dime at 50 feet. You will be delighted at the exceptional accuracy of your beautiful "Carbo-Jet" Pistol.

12

12. GERMAN LUGER TYPE FRONT SIGHT

Notice in this photograph the high front sight. This German Luger type front sight allows the shooter of the new "Carbo-Jet" Pistol to pull down on his target and gives him very keen perception in providing a perfect sight picture.

COMPARING THE GERMAN LUGER AND CARBO-JET FRONT SIGHTS

The photo shows the comparison of both the German Luger and the new "Carbo-Jet" Pistol. You will notice that the blade type front sights are very similar in appearance. One of the many reasons why the new "Carbo-Jet" Pistol has such fine accuracy.

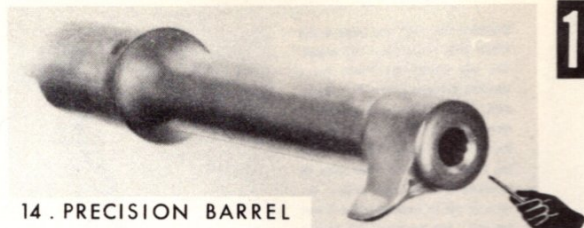

13

13. CUSTOM TARGET TRIGGER

In the new "Carbo-Jet" Pistol we have installed one of the finest of target triggers. Flat, wide and crisp. There is no creep and backlash as in most hand guns. A steady trigger pull will discharge the pistol and the shooter will be amazed to find that this target trigger has so much to do in the overall accuracy of his weapon. Notice in the photo the natural balance and position of the new "Carbo-Jet" Pistol. The trigger finger slips in naturally and your pistol fits your hand like a glove. Only the new "Carbo-Jet" Pistol offers you all of these sensational advantages.

14

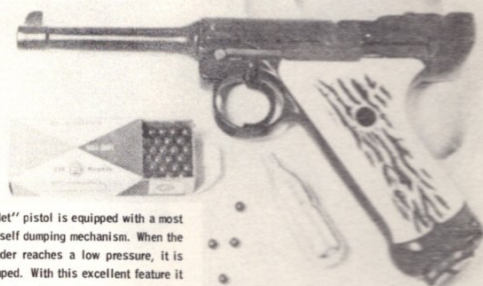

14. PRECISION BARREL

No matter what good qualities a pistol has unless the barrel is precision made, you will not have accuracy in firing. We have developed our own barrel making machine, which costs thousands of dollars. If you will look at the barrel of the new "Carbo-Jet" pistol you will notice the deep flutes and grooves and not just the average chicken scratches in most barrels. With the precision barrel in your new "Carbo-Jet" pistol you will have no trouble in making a perfect score with very little practice.

15

15. AUTOMATIC SELF-DUMPING MECHANISM

The new "Carbo-Jet" pistol is equipped with a most unique automatic self dumping mechanism. When the gas in the cylinder reaches a low pressure, it is automatically dumped. With this excellent feature it is not necessary to keep firing the pistol until all of the gas is used up. It will compensate itself automatically. The shooter need not have to worry about the volume of gas. It will always be sufficient to propel the bullet at its standard velocity.

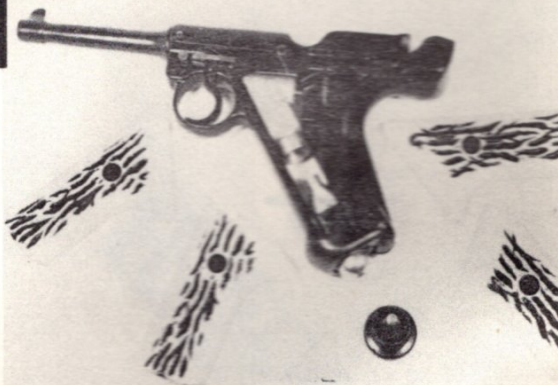

16

16. DEEP GUN METAL BLUE FINISH

All the new "Carbo-Jet" Pistols are given our deep blue gun metal finish. It is put on to last and is guaranteed not to reflect light in the shooter's eyes when sighting the pistol. Each and every part is run through separately in our large modern blue tanks. It is not just a dunking method as used by some manufacturers, but a real gun blue finish. We only use the best of materials and this fact can readily be noticed when personally inspecting the new "Carbo-Jet" Pistol.

17

17. PLASTIC STAG GRIPS

The new "Carbo-Jet" pistol comes equipped with beautiful plastic stag grips. We have seen similar grips sell for \$5.00 or more on German Lugers. These grips are made as much like the real stag as possible. When you grip the new "Carbo-Jet" Pistol, your hand will feel the rough surface of the grip, that will assure you of an obsolete non-slip grasp. Even in rain, your grip will be sure. No expense has been spared to bring you the very best.

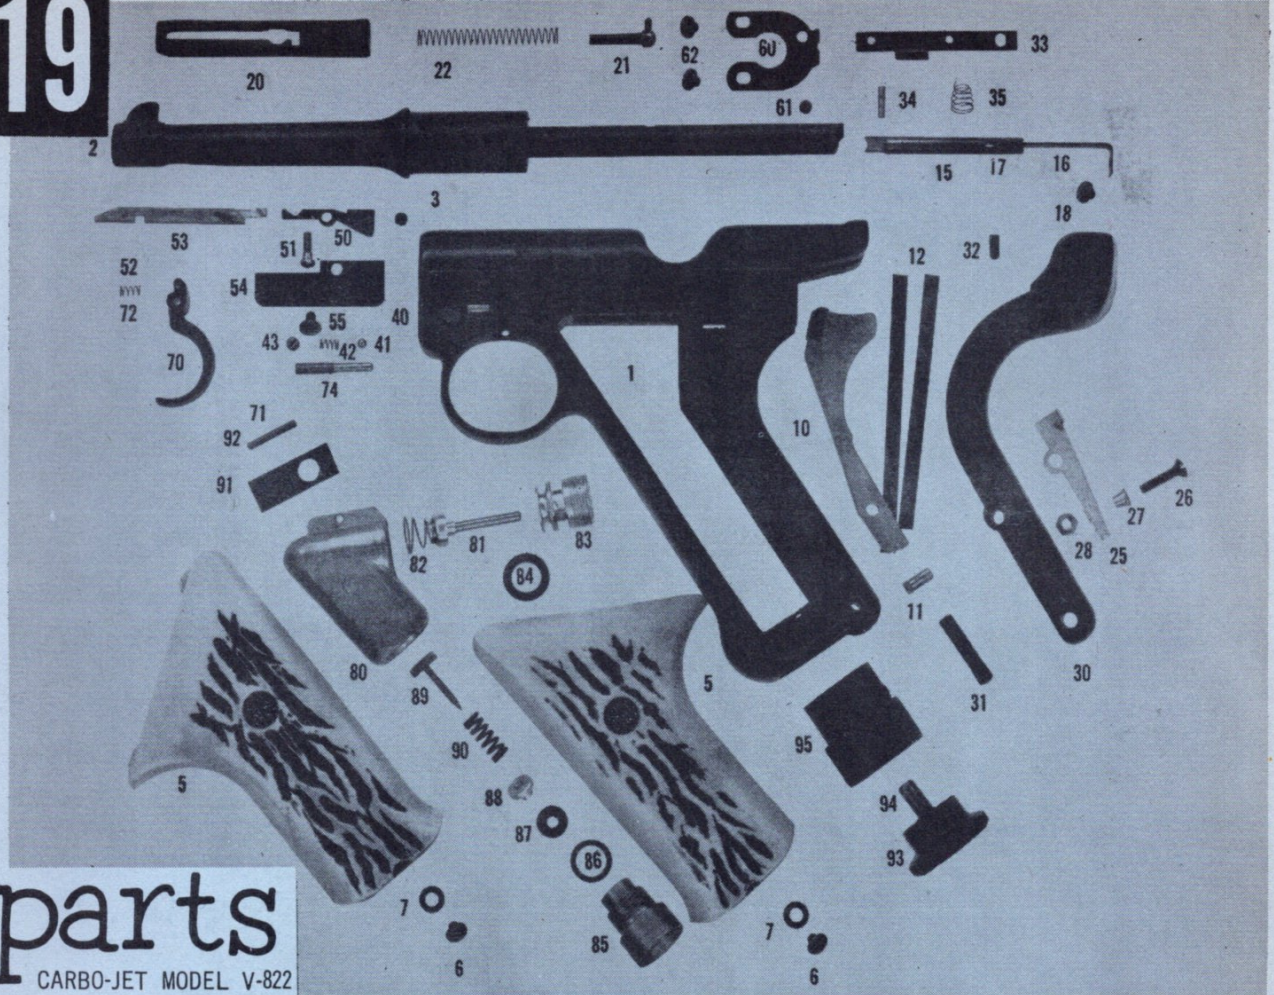

18

18. LEATHER HOLSTERS

Here is a beautiful top grain leather holster for your brand new "Carbo-Jet" Pistol. It's all made from the finest leather obtainable. Has a safety strap and is designed for quick draw work if desired. Plain Leather Holster for \$5.00 -- Hand Carved Leather Holster for \$8.50.
