Job Title: Applications Developer - Special Projects

Job Summary: The Application Developer - Special Projects will be responsible for developing and implementing custom software applications for unique business needs and challenges. This role will involve collaborating with stakeholders to understand project requirements, designing and developing software solutions, and providing ongoing support and maintenance.

Key Responsibilities:

- Collaborate with stakeholders to understand project requirements and goals.
- Design, develop, and implement custom software applications to meet project requirements.
- Test and debug software applications to ensure quality and reliability.
- Conduct research and analysis to identify new opportunities and emerging trends in technology.
- Provide ongoing support and maintenance for software applications.
- Document project processes, procedures, and outcomes.
- Work with cross-functional teams to ensure the integration and compatibility of software applications with other systems and applications.

Qualifications:

- Bachelor's degree in Computer Science, Information Technology, or a related field.
- At 3-5 years of experience in developing and implementing custom software applications or custom solutions for internal applications.
- Strong knowledge of programming languages such as Java, Python, or C#.
- Experience with software development tools such as Git, Visual Studio, or Eclipse.
- Basic Project Management with non-technical Stakeholders
- Experience with databases and data modeling.
- Strong analytical and problem-solving skills, with the ability to troubleshoot complex technical issues.
- Excellent communication and collaboration skills, with the ability to work effectively in a team environment.
- Project management methodologies such as Agile or Scrum is a plus.

Some Open Projects

- Using OCR technology to read customer POs and transform to cXML to import using the current workflows in place.

- Integrate Amazon business backend to our systems for importing POs, Ship Notices etc.
- Order Status through Web.
- Extend current cXML capabilities.
- Dashboards/Reports/KPIs.
- AI research with possible API development
