Fulaa means “waterfall” in the Madi language of the Sudanese people and signifies the abundant hope available through Jesus Christ, the living water.

A Ministry of Compassion and Concern to the Persecuted People and Making a Difference in the Lives of Orphans in South Sudan through Christ

RE: DECEMBER MONTHLY REPORT 2019

COMPONENTS:

1. Introduction
2. Daily CCH activities
3. Health and sanitation
4. Urgent needs - prioritized.
5. Conclusion

Introduction

Greetings in the name of our Lord Jesus Christ. The Lord is so wonderful, we have come this far. We appreciate all friends all over there for standing with us through thick and thin and we appreciate his love. This December Report presents you the activities in the children’s home section and psycho- social wellbeing, which covers a period of one month. Please review.

1. Arrival of visitors from YWAM (Youth with a Mission)

A group of evangelists visited cornerstone children’s home, and with us they spent a period of one month, where they involved children into different activities like learning, playing and many more. They also offered some cement that helped in the screening of two classrooms for the school. Below are the photos

2. Youth camp meeting.

The last camp meeting of the year for the youth was successfully done with in cornerstone evangelical free church- palanyua. As usual youth always gather to share experiences, have a time to learn spiritual matters, election of new representatives and many more. Facilitators were also invited from other churches as seen below.

Learning during the youth camp- by Pr.Justine

3. Family meeting- for cornerstone children's home

As a family, staffs had their end of year family meeting with the children, to welcome them back from school, congratulate the best performers, and help them in drawing programs on how to spend the festive season and guidance on how to have a safe and productive holiday. Children appreciated the staffs for taking good care of them, and also thanked the board for their education support for 2019.

4. Staff meeting program

During the staff meeting, the staffs were also appreciated for their good work within the year. They were communicated to, about their appraisal that would come soon and advised to get ready for the exercise that took one week and thereafter followed by appreciations and others suspensions.

5. Appraisal and appreciation program

This was all about reviewing the effectiveness and efficiency of staffs towards fulfilling their job roles and responsibilities. A few staffs were suspended due to unacceptable behaviours while others were also appreciates due to their good deeds. Below are the photos.

Appreciation of best performing staffs

6. Christmas eve celebrations

We are so grateful for our support toward Christmas celebrations together with the end of year 2019. Here are the photos of the shopping for kids' clothes, gifts from friends, food and church activities. Christmas clothes and shoes shopping and fitting in for the kids

Christmas food

Church activities

HEALTH PROGRESS REPORT -DECEMBER 2019

Cornerstone Medicare was established to help in the general health maintenance treatment, and promotion of safe and clean environments for the children especially orphans and the surrounding community. Among the services rendered include;

1. Consultation; done for the patients who normally visit the clinic for any conditions they face, explaining their problems thoroughly enables the nurse to suggest a better solution for proper healing.
2. Laboratory service; with the help of the Lab technician, testing malaria, typhoid, hepatitis B, HIV/AIDS, H. pyloric among others and vaccination of patients who are got negative of Hepatitis B especially.
3. Medication or treatment. The health personnel do treat the children when they are sick and also encourage mothers to take proper care under direct supervision of the home nurse.

4. Counselling and guidance; normally done for patients with chronic conditions, guiding them on how to properly care for themselves while under certain conditions. This also helps in the healing process
5. Minor surgery; this is done for abscess and wound especially those that are deep and open. However patients with complicated ones are referred to the main hospitals
6. Referrals; for the severe malaria cases, typhoid, brucellosis and other conditions that cannot be managed at the clinic.
7. First aid; for the patients around the community in case of emergencies and thereafter referred to the main hospital

General health of the children

- a) The general kids' health is fairly good, they have not suffered from severe conditions that need a referral, but treated and managed from within the clinic.
- b) Their feeding and personal hygiene is also very good, children have got a balanced diet. Buckets, bathing sponges, toothpaste and brushes have been provided for all. This will help in stopping of unnecessary sharing that lead to outbreak of scabies and ringworms.
- c) Our clinic has got a fridge and it is properly functioning, in good condition and to a maximum capacity. We are so grateful that the reagents have been provided. We can now do all the tests from within our clinic, and this has helped in administering adequate and proper medication.
- d) Our clinical report about the new children for the previous months clearly stated the Hepatitis B negative children who need immediate attention for Vaccination.
- e) We still stress the cases of Salvalnyani and Lucky Solomon who need another checkup
The two children were taken for HBeAG test and liver functional test. Therefore it remains the Viral Load tests and Abdominal Ultra sound.

The table below shows the different cases attended to against the number of people in the month of December

s/no	Disease	Females	Males	Total
1	Upper respiratory tract infections	04	03	07
2	Malaria	17	05	22
3	Intestinal worms	01	02	03
4	Abscess and wounds	02	03	05
	Total	24	13	37

The clinic has not registered any admissions and referrals in the month of December. Malaria took the highest number of patients due to the high levels of mosquito breeding, since the seasons have changed abit. However all cases are managed from within.

Challenges/ Urgent needs

1. No proper house for medical work and drug storage. The summer season is now approaching and the too much sunshine normally weakens the durability of drugs. More so, storage facility is not good enough for all the activities carried out in the clinic, therefore a limited space.
2. No incinerator for clinical waste disposal. Much as we can now test and do other treatments from within, it's harmful for the community if these wastes are openly burnt. We request that the board looks into it too.

Urgent reminder.

1. **Hepatitis B vaccines.**

In our assessment, we have 30 people to be factored for the first dose. Below is the initial plan.

Unit price	No. of people	Total amount	RATE	USD
40,000	30	1,200,000	3,600	350

Therefore the above plan will cater for only the first dose. So if all the doses, the amount will be 3,600,000 shillings, equal to 1,000 usd.

Thank you so much
Clinical report- compiled by home Nurse.

URGENT NEEDS- PRIORITISED

- 1- Dormitory facility for the boys \$75000
- 2- Clothes for all the children \$1500
- 3- Need for a farmland for sustainability \$5000
- 4- Need for the registration of the children's home.\$1500

Conclusion

In conclusion therefore, we congratulate all staffs from the different departments for achievements seen within December. We therefore conclude by saying May God bless all your Efforts. We are looking forward to working together, in starting the children's Home registration officially after another inspection to come soon. And our prayer is that may God lead and guide you as you struggle towards the well establishment of all projects in Adjumani - Uganda. Wishing a happy and prosperous new year 2020 to all friends and board members.
