

Unpacking and installing

1. Congratulations! You are now the proud owner of a Banana Bungee™. Let's begin installation now that you've unpacked it.
2. Select location under shelf/cabinet, make pilot hole and then install eye screw. Join S-hook with eye screw. Otherwise suspend from other locations such as pot rack using the S-hook.

Loading Bananas

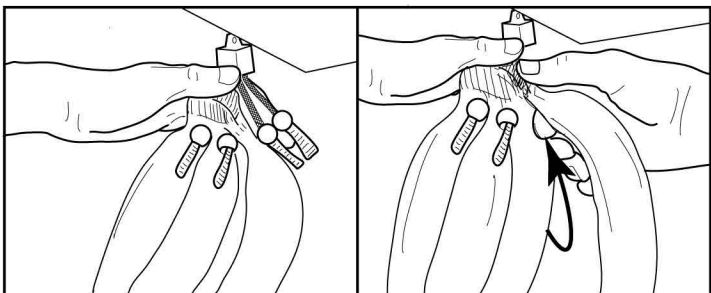

1. Gently stretch one bungee by pinching pull-tab and lightly pull down. With other hand position bananas as shown.
2. While maintaining stretch, maneuver the pull-tab and bead completely through the banana fingers.

3. Repeat the above step once more using a different strand.

Minimize browning and promote even-ripening

1. Remove a banana by resting one hand around the stem and main housing (as shown). Key: Don't grip the meaty sections of the bunch.
2. Lift desired banana up and away separating it from the main stem. In some cases you may need to support banana near stem.

Hanging a single banana

1. With Banana Bungee™ suspended from eye-screw hold two strands (as shown) one crossing the other. Guide bead around, twisting up and then pushed through strands (creating button hole).
2. Pull beads together with one hand (as shown). Lightly pull down to expose the slot created. Use free hand to insert stem of banana. Give slight tug (on tabs) if necessary.
