

Hydro-Mixer XL Plumbing Diagram

#1 – The Remote Rinse Module saves you time from going back to your rig and allows you to flush/rinse your system w/ fresh water. It determines whether you pull water or SH through the CHEM valve on the Hydro-Mixer. It also allows remote shutoff of Soap 1. Soap 2 will remain manual shutoff.

#2 – Mixed solution through into pump

- Water & chem supply lines should be of similar length for accurate and consistent metering.
- Water supply for flush valve and water valve should be dedicated. Do not tee into other lines.
- Always use strainers on pickup lines in tanks.
- Use PVC slotted filter in Chem tank, **NO metal except titanium.**

#3 – Line shows the CHEM on, when remote is turned off, WATER will run through this line.

#4 – Bypass hose needs to be a minimum of 25' long. **Bypass time limit to be 10 mins. MAX.** System damage could occur if bypass is sustained for said duration
