

Glue

G

Glue that is specifically designed for fabric. It is used to give temporary and permanent hold of seams. Specialist glues include applique glues, temporary basting glues, and glues for English Paper Piecing. Fabric glue spray is an ideal clothing glue because it dries clear, is repositionable, and will not bleed through materials.

Fabric glues are made with acrylic as a main ingredient instead of resin, like tacky glue. Acrylic-based glue is more water-resistant and flexible than PVA glue, allowing it to hold up better in the wash.
