

Home Sewer

H

A home sewer is the target of the domestic sewing machine manufacturers. Traditionally all clothing would be made at home by, usually, the female(s) in the household. This would include repairing garments to prolong their life. Home sewing would include garments, baby and children's clothing and home furnishings. As ready-to-wear, off-the-peg garments become more readily available home sewing has become a hobby rather than a necessity.

Since the 1960s the term sewist has been in use to denote a connection between sewing and artistry.
