

Magnifying Glass

A Magnifying Glass can be used as a single or double lens to easily see the machine needle drop position and stitches in clear detail. Perfect for intricate projects. The glass can be attached to the sewing machine.

The magnifying glass helps to:

- Check needle drop position and fabric edge when sewing quilt bindings and appliqués;
- Check needle drop position to start or end marked point for sewing;
- Check threading if you do manual threading on special needles, like wing needle, twin needles, metallic thread.
