●▲: The Makerspace Initiative

We put together spaces that let you make.

At **The Makerspace Initiative**, we aspire to bring a shift in the mindset of various institutions, communities & societies through our transformative Makerspaces.

We believe that **making & manufacturing** are nothing less than superpowers, which create marvellous things when used to empower individuals.

We are dedicated to fostering participatory design that closely engages with the stakeholders to understand their needs and crafting spaces for them.

Institutions can enhance **differential learning** by introducing making into existing curricula.

We are your one-stop shop for the entire setup of the **School Makerspace**, from equipment & materials to furniture & storage organisers. No more hassle of coordinating with countless different suppliers for installation & support.

The Makerspace Initiative will be the singular point of contact for all your queries and requests. Besides having shorter lead times for equipment & tools, you're in complete control of the quality.

One team.

One budget.

One timeline.

One contact.

One standard.

No more need to compromise: Multiple vendors. Multiple priorities. Multiple schedules. Multiple contacts. No accountability.

We design

For all scales & needs.

For the best safety regulations.

For function & fun.

For supporting you throughout all your projects.

Join us in realising the potential of making & witness the transformative power it holds!

Ourtools, equipment & spaces

We are strong advocates for the user having access to the right tools, equipment & space in their most optimal form.

Our Makerspaces are thoughtfully designed, incorporating ergonomic data to ensure the right reach & accessibility for a seamless user experience.

At the core of product development lies **prototyping**, a crucial phase that empowers users to conceptualise, experiment, iterate & refine their ideas.

Makerspaces serve as forgiving realms where individuals can **try, fail & repeat**, for this iterative process breathes life into novel products.

Schools:

The shaping of a mindset and behaviour starts early. Tinkering boosts motor skills in children, and allows them to express themselves creatively.

"No great things are achieved without the right tools."

- The Makerspace Initiative

Colleges & Universities:

Makerspaces open up infinite possibilities for building and prototyping with different materials and processes, introducing students to valuable skill sets and a world full of new opportunities and careers.

Organisations & Communities:

To create a vibrant and dynamic culture of innovation, collaboration and inventiveness.
