

Automatic Lights and Wipers

AUTOMATIC WIPERS

- With wipers set to intermittent operation, they automatically start clearing the windshield when the Rain Light Sensor detects precipitation.
- The system will maintain interval or continuous wiping if precipitation continues, switching wipers off when not needed anymore.

AUTOMATIC HEADLAMPS on DA 5.0

- With selector in the “A” position, the Rain Light Sensor in the windshield recognizes poor visibility conditions and switches on the headlamps, switching them off when visibility improves again.
- Fog lights are non-operational in Automatic mode.
