

Full Braking on Moving & Stopped Pedestrians

- Works at speeds of 25 mph and below
- If a moving pedestrian should enter or come to a stop in the trucks path, the radar and camera combination recognizes them
- Upon recognition, the system displays a visual warning in the dash cluster and emits an audio warning accompanied by partial braking
- Should the driver not react to partial braking, **Detroit Assurance 5.0** will engage in full emergency braking on tractor and trailer
