

DT12- Hill Start Aid (HSA)

Hill Start Aid (HSA)

Brake assist feature to prevent rollback for up to 3 seconds when transitioning from a standstill to acceleration on a grade of 3% or more. The ABS module holds and modulates brake pressure **after the driver has released their foot from the brake pedal**. HSA is "on" by default. It can be turned off by pressing and releasing the HSA override switch on the dash.

HSA is enabled (holds brake pressure) with the following conditions:

- ✓ Vehicle is in gear
- ✓ Vehicle is not moving
- ✓ Brake pressure exists
- ✓ No ABS system faults are active
- ✓ HSA switch is not disabled
