Facility-level Risk Assessments

WHAT WE DO

SITE VISIT

SS&C first has the client provide their own self-assessment. This is an important first step in the process.

Next, SS&C thoroughly examines each facility, including all five layers:

We will interview and obtain feedback from key staff. Depending on the size of the facility, the site assessment typically takes several hours at each location. Someone with extensive knowledge of the facility is necessary to provide a tour and to answer any policy and procedure questions. We often work closely with a School Resource Officer during this process if an SRO is in place.

TVRA REPORT

SS&C will provide a Threat, Vulnerability, and Risk Assessment (TVRA) report detailing our findings, identifying potential risks and vulnerabilities in all layers that should be addressed, and making recommendations about actionable steps that could be taken to address each of the identified risks and vulnerabilities to improve safety and security.
