## Pulley Question – Vertical masses

Two masses,  $m_1$  (30kg) and  $m_2$  (20kg) are connected by a rope over a frictionless pulley of negligible mass. The masses are released from rest. Air resistance is negligible.

- a) Calculate the acceleration of the masses once they are released. (2 marks)

# SOLUTION: Pulley Question – Vertical masses

Two masses,  $m_1$  (30kg) and  $m_2$  (20kg) are connected by a rope over a frictionless pulley of negligible mass. The masses are released from rest. Air resistance is negligible.

a) Calculate the acceleration of the masses once they are released. (2 marks)

$$\sum F = ma$$

$$W_1 - W_2 - T_1 + T_2 = (m_1 + m_2)a$$

**Note:**  $T_1 = T_2$  as tension is uniform in rope.

$$m_1g - m_2g = (m_1 + m_2)a$$

$$g(m_1 - m_2) = (m_1 + m_2)a$$

**Note:** The above simplified expression may be useful for similar questions.

$$\therefore a = g \left( \frac{m_1 - m_2}{m_1 + m_2} \right)$$

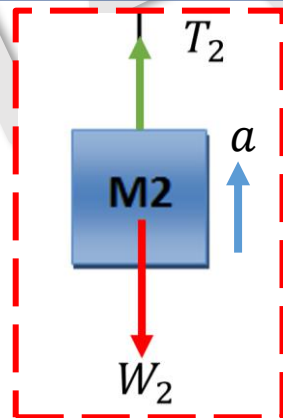

$$a = 9.8 \left( \frac{30 - 20}{30 + 20} \right) = 1.96$$

$$\therefore a = 2.0 \text{ m/s}^2 \text{ (in the direction of } W_1 \text{)}$$

b) Calculate the tension in the rope. (2 marks)

Isolate the system at  $M_2$

*"Pretend to cut the rope"*

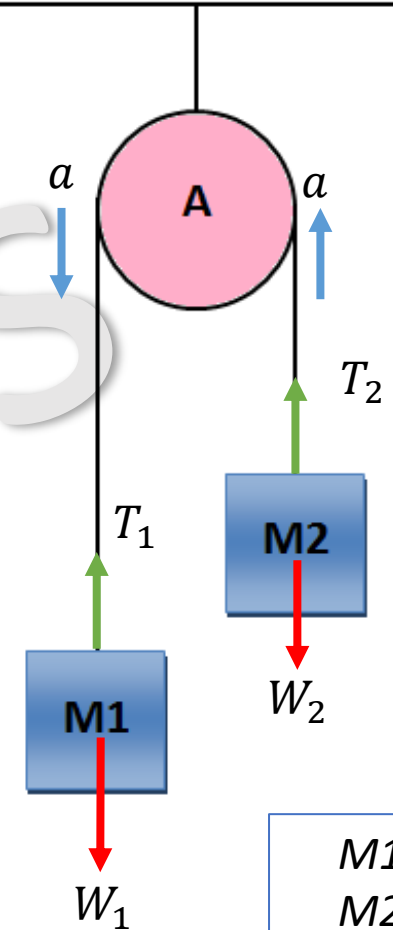

$$\sum F = ma$$

$$W_2 - T_2 = m_2(-a)$$

$$(20)(9.8) - T_2 = (20)(-1.96)$$

$$T_2 = 235.2$$

$$\therefore T_2 = 240\text{N}$$

$M1 = 30\text{kg}$   
 $M2 = 20\text{kg}$   
 $g = 9.8\text{m/s}^2$   
 Ignore friction
