

## TimeCore introduces the Eclipse Watch- Where form and function meet fashion.

19 September 2022

TimeCore launches a new microbrand where form and function meet fashion. Industrial design is at the core of every tool grade watch we will make. TimeCore boldly refuses to conform.

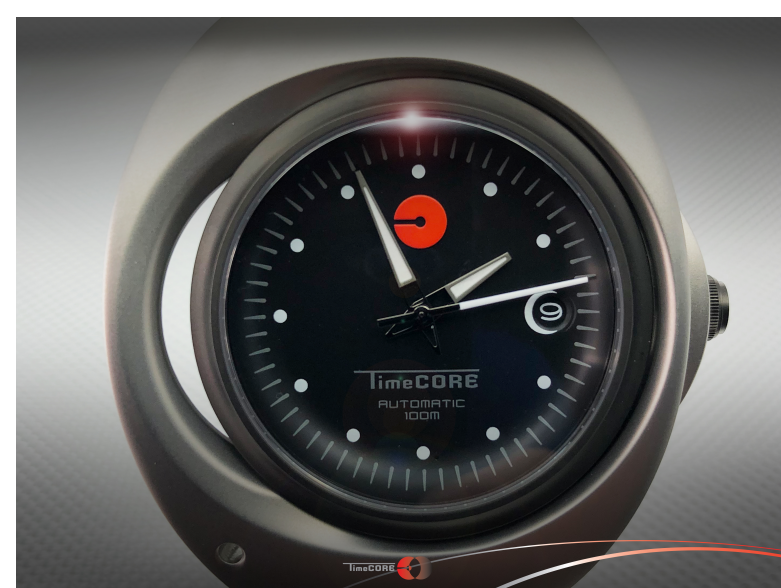

All images are actual running pre-production samples.

Meet the TimeCore Eclipse - Celebrating the final frontier. The Eclipse captures time and motion through space. Its asymmetric 3pc case design references the motion of our sun, planets, and moons during an eclipse.

The dial and bezel use a concave outer radius edge that connotes the dish shape craters that dot the surface of so many celestial objects. The shape is made to hold highlights, creating focal points. How reflections run over the surface of a product is a critical foundation of good design. The TimeCore dot logo is proudly displayed at the 12 o'clock position.

Eclipse features 100 meter water resistance with a stainless steel 3pc case. Domed K1 Mineral lens blends perfectly with the case, great for strength, shatter and scratch resistance. The screw-down crown is finely machined to feel as though it's straight off a starship. Unique detailed fasteners pull elements together along with a stamped and engraved screw-down case back. Elements blend together beautifully.

TimeCore's custom poly-band ties together the silhouette of the outer case. The bands shown are cool 3-d prints of the tooling file. Actual band will have a typical silicone or TPU look and finish (similar to G-shock or Seiko). The case back is custom engraved and stamped proudly with the TimeCore logo and surrounding engine core.

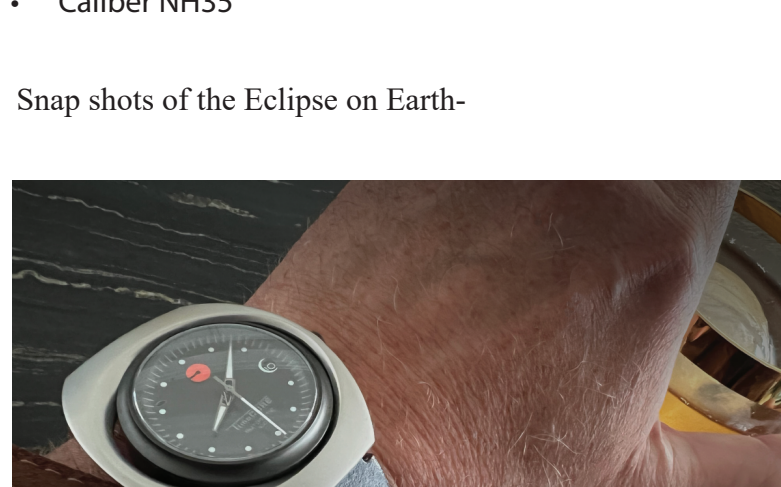

Three Unique Color Options-

Features-

- Unique eclipse asymmetric case design
- Case diameter: 52mm
- Designed for rugged activities w/ 100m water resistance.
- Does well in the vacuum of space. Well probably, you astronauts let us know!
- Screw-down case back, etched and engraved
- Automatic with manual, w/etched and hacked capability
- 21,600 vibrations per hour
- Power reserve: approximately 41 hours
- 23 jewels
- 3 bold dial options and case color schemes
- Date calendar
- LumiBrite hands and markers
- K1 mineral crystal for superior scratch resistance and strength
- Stainless steel case with PVD coating
- Custom TPU or silicone band
- Caliber NH35

Snap shots of the Eclipse on Earth-

Eclipse will be proudly assembled in the USA using parts made in Japan and China, giving us a step-up in quality control at a fair price.

Born out of the fashion business, TimeCore is a family affair. Our team of designers have over four decades of experience. Trained at ACCD and CCS, two of the best industrial design and automotive design colleges in the world, our designers have decades of experience working for notable companies such as Warner Brothers, Sony, Toshiba, NASCAR, Cesar Pelli Architecture, MTM Watch, Mattel and Hasbro. Candidly, our team has done everything from custom cars, and even film production design, numerous consumer products, and even a few good toys along the way. We have checked a lot of design boxes in our time, but always wanted to make watches. Watches that push the boundaries of form and convention.
