Announcement

MetaSoccer x MEIS—A Perkins Eastman Studio x Dossier Digital Launches Stadium Designs in the Metaverse

New York, Geneva, 28 February 2022 - We are excited to announce our first major partnership: Dossier Digital, a platform for bespoke 3D digital assets, is working with world-renowned architects MEIS—A Perkins Eastman Studio to design metaverse-ready stadiums for the soon-to-be-launched MetaSoccer Play-To-Earn soccer game.

MetaSoccer is the first blockchain-based soccer metaverse where users can create their own club and generate income while playing. Created by Champion Games, a game studio based in Barcelona, MetaSoccer is focused on providing its users the total GameFi experience, allowing them to enter the ecosystem as club owners or managers, where they can have fun while generating income. MetaSoccer embraces multiple revenue streams such as NFT asset drops, fees from different transactions across the ecosystem, sponsorships, and broadcasting.

MetaSoccer, set to become one of the most sought-after P2E sports games in the world, is determined to offer the highest-quality digital assets available. Enter Dossier Digital: we are pleased to introduce the creative talents of our partner, industry leader MEIS, to MetaSoccer, thus wedding the best of international stadium design, with the cutting-edge domain of the metaverse.

MEIS, a boutique design practice with offices in Los Angeles and New York, specializes in the design of experience and spectacle. From sports and entertainment venues to urban activation, MEIS creates environments that inspire people to gather and celebrate. Dan Meis, FAIA, one of the leading innovators in the design of civic, urban, entertainment, and sporting venues, leads the practice, with some of his best-known built designs including Crypto.com Arena, Everton FC Stadium, Safeco Field and Paul Brown Stadium. Recognized as one of the profession's most inspired practices comprised of ultra-creative and talented individuals, MEIS creates award-winning, unique, and memorable spectator experiences that result in significant return on investment and revenue generation for clients.

With this partnership, MetaSoccer will have exclusive access to MEIS's stunning stadium designs—which will be minted as in-game NFTs and made available to MetaSoccer users and integrated into the metaverse in the coming months. As the game evolves, 3D match simulations will be held inside our stadiums. This dovetails with Dossier Digital's vision of realizing the potential of speculative architecture. MetaSoccer explicitly illustrates the growing capacities of the metaverse, and we are pleased to launch MEIS into this exciting new frontier.
