

Valued Residents Naples Reserve

A Message From BrightView

Residents of Naples Reserve,

Beginning this week, our Tree Care Division will be moving throughout the community trimming the common palms and hardwood trees. They will start with the palm trimming and then move on to the hardwoods next.

The palms will be addressed first. This will include trimming and cleaning of the Fishtail Palms. Once they have worked their way through the community, they will come back with the same cycle to do the hardwoods.

Our arboricultural maintenance program focuses on selective, health-driven pruning practices that prioritize the long-term vitality of both hardwood trees and palms. We remove only what is necessary to maintain structural integrity, ensure public safety, and promote proper growth, rather than performing excessive or cosmetic trimming. All work is conducted in accordance with applicable municipal codes and industry standards, ensuring that pruning methods are both compliant and appropriate for each species. By taking this measured approach, we support the natural form of the trees while reducing stress, preventing unnecessary damage, and preserving overall canopy health across the landscape.

Please be aware they will be on the common roadways working. As always there will be signs and cones all around.
