

# ASSURANCE SOLUTIONS

## SIMPLIFIED ENGINEERING TO SUPPORT YOU AND YOUR TEAM

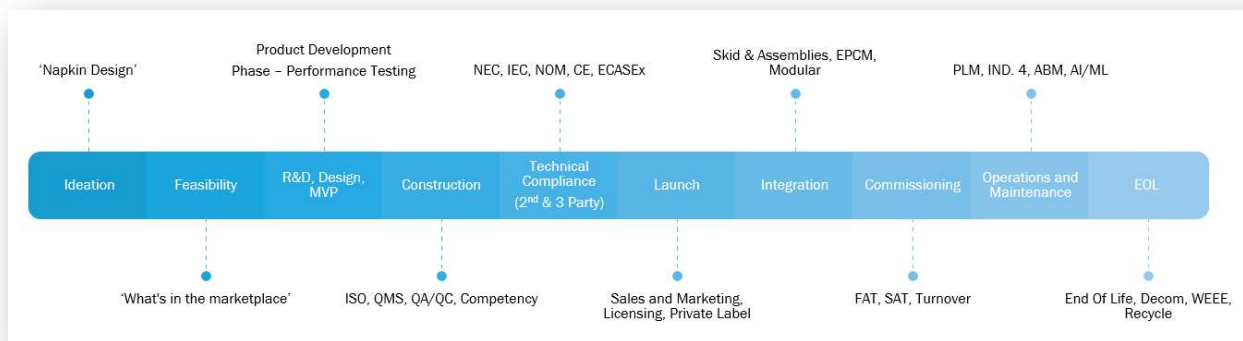

Whatever your challenge, you can count on the Radical Ingenuity Group to support you and your teams to get projects, services and products commercialised as fast as possible through simplified processes developed with you.

R.I.G provides a wide range of flexible subject matter expert bandwidth with a joint goal of exceptional experience through coaching, support and direction to allow a fully customer centric collaboration.

Risk assessment is in every industry today - 'Risk versus Cost', 'Best Available Technique' and managing our risk to 'as low as reasonably practical' are key methodologies where value engineering and industry domain expertise is applied to empower innovation.

### Where are you in your project value chain?

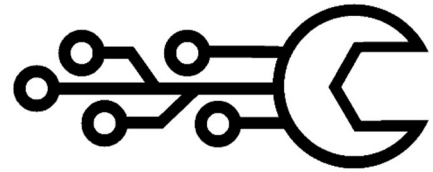

Whether you are at the start of your journey, or have failed a factory acceptance test, R.I.G. is here to empower you with actionable insights into the best course of action.

It is possible the anticipation of inflated T.I.C. costs (Testing, Inspection and Certification) by third parties stifles a project at the ideation stage. This T.I.C. system is an antiquated way of extracting revenue by a commoditized industry that doesn't fit the current bleeding edge risk management requirements of Industry 4 – chat with one of our tenured SME's to show you all the options before the design hits the cutting room floor.

**Technical compliance is a living, breathing ecosystem of converging strategies that need to be managed in a way that allows innovators to keep innovating.**

## SIMPLIFIED ENGINEERING THROUGH PARTNERSHIPS

### Certification

The world of stickers, labels and certification seems to be disconnected from Operational Technologies – the synergy in the various disciplines across the ecosystem is not obvious.

Modern speed to market requirements are more 'outcome based' - OEM's, Integrators, EPC's and End Users have less time than ever to consider technical compliance 'clause by clause'.

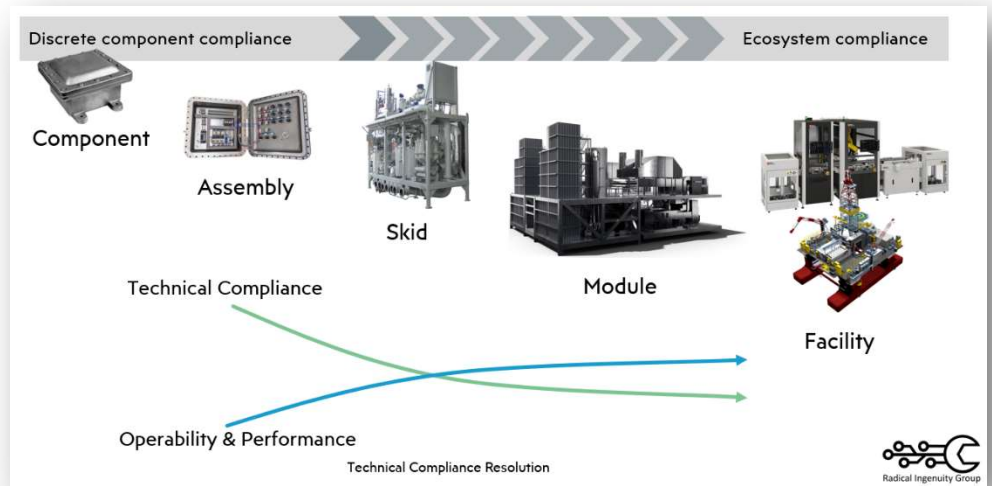

Innovators demand insights fast to make critical decisions.

This is where R.I.G.'s global network of SME's 'on demand' can enable being first to market - every time.

### Technical Compliance Resolution

Whichever stage that you enter the project value chain, technical compliance is important. Throughout the process the third party resources 'zoom in' or 'zoom out' at various points on discrete aspects within their 'expert' bandwidth – this is where slip occurs.

Even with the best intentions, if there is no holistic oversight of systems by knowledgeable competent subject matter experts providing coaching, direction and corrections – the project can end up missing the target. This appears to be a worsening issue.

Customer specifications are usually significantly more stringent than minimum industry standards, misinterpret those at your peril.

Engage R.I.G. early to avoid these issues and identify potential savings by value engineering the technical compliance processes.

### Global Market Access

The global market is the gateway to many projects financial success. Quickly determining the engineering requirements and developing the optimal technical framework for systemic adaptability is key.

Whether it is for China, the Middle East, Africa, Korea, the UK or any other economic area, R.I.G. can help empower your *go to market* strategy for the increased revenues. We are experts in IEC, CE, NRTL, ANSI, ASME, API, UL, CSA, NOM, InMetro, CCC, SASO, ECASEx, UKCA and are on the leading edge of all global requirements engineering.

### Just need a certificate or label?

R.I.G. is connected to all major certification providers to with 100% advocacy and support to ensure you are not led down a path of over engineered noncompliance activities, a common issue.

You, the customer, has to tell the independent labs what the testing requirements are due to impartiality requirements of ISO17065 – *don't let them allow you to follow the wrong path.*

**Training?** – All our SME's are educators, let's chat.
