CABINET REFINISHING FREQUENTLY ASKED QUESTIONS

Is it better to repaint kitchen cabinets or replace them?

Refinishing solid cabinets saves 70–80% over replacement. We use a multi-step spray process and a high-end, specialized 2K polyurethane coating to deliver a chip-resistant, better-than-factory finish. If you are looking for a complete style change or have major door defects, getting new doors is also an option that we can easily handle.

What products do you use for cabinet refinishing?

We use a 2K catalyzed polyurethane — a step up from the one-part paint most painters use on cabinets. It cures faster and harder, and resists stains and daily kitchen abuse far better. Doors and drawers are sprayed off-site for a factory-smooth finish; boxes are sprayed in place, all backed by our 5-year warranty.

Do I need to empty all my cabinets and drawers before you start?

You only need to empty drawers if we are painting the insides or upgrading the tracks. For the cabinet boxes, simply push your items back a few inches from the front edges. We meticulously mask off all openings to ensure your belongings stay completely protected from dust and overspray.

How long does cabinet refinishing take, and will I have kitchen access?

Most residential cabinet projects take 1 to 2 business days on-site. We prep and spray doors in an off-site facility to minimize disruption. You typically will not have access to your kitchen the first night, but you can use your appliances normally for the rest of the project.

Do you remove, or replace hardware and fixtures?

Yes! While your doors are off, we can easily update your hardware:

- *Same size*: Installed at no extra charge.
- *Different size:* Additional fee to fill and redrill holes.
- *Soft-close upgrade:* We can also add soft-close hinges and drawer slides.

What refinishing options do I have for my cabinets?

More than just a color change. We offer solid painting, staining, white washing, and gel stain. We'll help you choose based on your cabinets' condition and the look you want.
