INTERIOR PROJECTS FREQUENTLY ASKED QUESTIONS

What interior protection is included, and do I need to move furniture?

We provide full protection for your floors and furniture to ensure your home stays completely safe and clean! Having furniture moved away from the walls prior to our arrival allows our crew to get straight to work and keep your project running smoothly on schedule.

What Product do you use?

We tailor premium Sherwin-Williams paints to your surfaces: Emerald Trim Urethane for doors and trim, Emerald Matte for durable walls, and Cashmere Flat for smooth ceilings. We can also accommodate any custom paint preferences!

Do you build and paint custom accent walls, board & batten, or decorative millwork?

Yes. Our in-house team provides full-service carpentry and finishing under one roof. We design, build, and paint custom feature walls including modern geometric board and batten, classic applied wall moldings, and tailored architectural millwork delivering seamless trim carpentry with a factory-grade paint finish.

Can I stay in the house while you're working?

Almost always, yes. Most interior jobs are room-by-room or floor-by-floor, so the rest of the house stays livable. We'll tell you upfront if a particular job (say, a full whole-house repaint) makes that harder for a stretch of days. Some clients find it preferable to leave for their own convenience.

Do you remove, or replace hardware and fixtures?

Yes. Our comprehensive preparation includes removing and labeling all switch plates, outlet covers, light fixtures, and cabinet pulls before painting. During final reassembly, we can reinstall your original hardware, spray-paint existing pieces for a clean update, or mount brand-new knobs and pulls.

Do you repair drywall damages like nail holes or minor cracks before painting?

Yes! Our standard prep includes patching nail holes, filling small dents, spackling minor cracks, and sanding everything smooth before painting. Larger drywall repairs can also be included in your estimate upon request.
