

A GREEN CHOICE: Chlorine Dioxide

Generator supply chain produces NO landfill waste.
Operations produce NO greenhouse gases.
Our facility strictly adheres to energy saving practices.

Our Generation Process:

- Uses less electricity than a small power tool.
- Can replace carcinogenic fumigation processes.
- Leaves no residuals or waste to treat or clean up.
- Does NOT affect the ozone layer.
- Enables the elimination of liquid agents and their disposal.
- Is energy efficient running at ambient temperature and pressure.
- Does not chlorinate organic material, resulting in significant decreases in trihalomethanes (THMs), haloacetic acids (HAAs), chloramines and other chlorinated organic compounds that are thought to be carcinogens.

GULF STERILIZATION
