

MARK ANTHONY WORKSHOP – Wednesdays & Thursdays – July 31, Aug 1, 7, 8 (10am - 1pm)

GETTING A PERSPECTIVE ON PERSPECTIVE

Frankly, not many of us are excited about perspective drawing. However, truth be told, without an intuitive understanding of this sometimes confusing study we can be lost in our representational work. The reality is we were born into a perspective world. We clearly see and understand it intuitively. However, we may not be able to see it in a definable way. Come join Mark Anthony as he unravels big mysteries about our perspective world in simple, understandable terms. It is bound to change the way you see everything.

Session 1 - A definable orientation tour of our visual world in the context of linear perspective and birds-eye-view.

Session 2 - Measuring spatial recession in 1 and 2 point perspective and plotting complex shapes on a perspective grid.

Session 3 - Drawing the perfect cube and other geometric shapes.

Session 4 - Drawing complex 3 dimensional objects. Measuring relationships between vertical and horizontal depth using plan view.

MATERIALS LIST

Recommended Equipment (this one-off event may inspire you to borrow some of these tools):

- Desk, computer/tablet with featured video conferencing program
- HB Pencil, sharpener, eraser
- Drawing Paper - 18x24 inch, clips
- Drawing Board 24x24 inch
- Measuring ruler, and a long straight edge
- Set square (45,45,90 degrees, at least 12 inch, 30cm per side)
- Rolling Parallel Ruler
- Protractor
- Cellphone or small camera for taking pictures
