

MEDICAL FOODS

The term “medical food,” as defined in section 5(b) of the Orphan Drug Act (21 U.S.C. 360ee (b) (3)) is “a food which is formulated to be consumed or administered enterally under the supervision of a physician and which is intended for the specific dietary management of a disease or condition for which distinctive nutritional requirements, based on recognized scientific principles, are established by medical evaluation.”

EBM Medical utilizes USP grade active pharmaceutical ingredients, supported by evidence-based medicine, to address metabolic deficiencies for acute and chronic conditions.
