

Nuvida offers a versatile portfolio for all of your wound care needs. Depending on your preference, we have the following grafts available:

- carePATCH™ - retains amniotic membrane's natural structure including epithelium and basement membrane layers.
- Restorigin: Intended for homologous use only. Acts as a sheet scaffold and wound cover, that is a natural bandage shielding wounds from its external environment.
- Complete FT is Multi-Layer graft processed using a proprietary processing technology to ensure all naturally occurring components of birth tissue remain intact through processing. It contains the Amnion, Chorion as well as the important Intermediate Layer (IL)/Spongy layer of the placenta.
- Procenta® is an acellular, highly hydrophilic, structural extracellular matrix derived from placental connective tissue. Comprised of extracellular matrix scaffold that serves as a cover, to offer protection from the surrounding environment, and to retain fluid.
- Helicoll is a bioengineered high purity Type-I collagen (>97% pure) forming an acellular skin substitute construct that is highly bioactive, cell conducive, and supportive towards enhancing tissue generation for wound management. Helicoll is an acellular dermal replacement product and is within the definition of a bioengineered skin substitute. It provides a frame-work that promotes the regeneration of blood vessels and supports biologic cell migration due to the resorbable properties of Helicoll. Treatment course typically involves 1 to 4 applications.
