

Mongo Pilfer part 3

Answers to Previous Questions

A search for “mongo database cheat sheet” brought up this site. <https://dzone.com/articles/mongodb-commands-cheat-sheet-for-beginners> With the commands show dbs, use “dbname”, and show tables, we get this far.

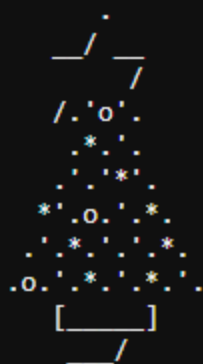

```
> show dbs
admin  0.000GB
elfu   0.000GB
local  0.000GB
test   0.000GB
> use elfu
switched to db elfu
> show tables
bait
chum
line
metadata
solution
system.js
tackle
tincan
```

Now we need to read the contents of the solutions table. Another site from the same search found this. <https://opentechguides.com/how-to/article/mongodb/118/mongodb-cheatsheet.html>

Show all documents in the collection	db.collection.find()	db.books.find()
--------------------------------------	----------------------	-----------------

Let’s see if that will show us the contents of solutions.

```
> show tables
bait
chum
line
metadata
solution
system.js
tackle
tincan
> db.solution.find()
{ "_id" : "You did good! Just run the command between the stars: ** db.loadServerScripts();displaySolution(); **" }
> db.loadServerScripts();displaySolution();
```

Congratulations!!
