Quality Assurance **Services**

BOTTLING QUALITY SUPPORT

You've worked hard to get your wines just right and now it's time to bottle. If you're like most smaller wineries your bottling only occurs a few weeks to a few months a year and having a full-time trained package quality technician to monitor your bottling is simply not in the budget leaving the winemaker or other key personnel to oversee your bottling. More often than not it may be someone hastily trained to perform a few essential tasks. Since bottlings are infrequent, that individual must re-learn the tasks leaving opportunities for errors.

Why not avoid those risks and have your winemaker actually get back to doing what they love most – making wine. Let PackDyne handle your bottling quality needs. PackDyne technicians are trained and equipped to perform all essential quality tests and evaluations:

- Hourly bottle vacuum/pressure testing
- Hourly dissolved oxygen testing
- Bottle fill testing (twice per shift)
- Hourly evaluation and recording of all materials applications (labels, closures, top finishes, etc.)
- Recording of vendor tracking data for all materials as they move through your bottling line for recall or supplier issue traceability (important information when supply incidents present themselves)
- Recording of pertinent observations affecting your bottling.

DOCUMENTATION

For each day's completed bottling PackDyne will furnish a report to you within 24 hours detailing your bottling history providing you with valuable documentation for compliance and traceability. PackDyne of course treats all of your information with discretion and non-disclosure agreements can be worked out prior to your bottling.

CUSTOMER SUPPORT

Packaging materials and application issues can create costly interruptions during bottling. We can assist you in determining the root cause of the issue to get your bottling back on track.

Most bottlings generally occur without incident but should problems develop PackDyne Technical Services is your advocate when supplier issues surface. With PackDyne on site we supply you with an incident report allowing your vendor to address materials issues quickly by narrowing the range of materials affected. With expert technical support we also assist in troubleshooting problems and help provide solutions in time-sensitive situations.

YOUR PARTNER IN TECHNICAL SERVICES

PackDyne Technical Services provides you with an economical solution to your bottling quality needs. By paying for only the days you bottle, you secure the advantage of a fully trained and equipped technician on site without the added cost of testing equipment and maintaining a full-time quality technician saving you thousands in labor and training costs yearly. Moreover, you reap the benefits of invaluable documentation giving you peace of mind should it become necessary to track down issues at a later date.
