

Business Continuity & Disaster Recovery

The Cyturus BC/DR engagement results in a customized package of rank-ordered remediation actions to mitigate the associated business risks as well as a fully managed project plan to ensure the successful operationalization of the plan into your organization. In addition, executing practice exercises of the newly formulated plan allows for all stakeholders to experience near real-world circumstances and provides for on-going refinements based on the exercise results.

Cyturus specializes in managing adverse situations, crisis communications, and immediate risk appraisal. Our BC/DR practice focuses on six distinct areas of concentration.

- Crisis Management*
- Administrative and Human Resources*
- Work Area and Facilities*
- Technical Systems and Infrastructure*
- Suppliers and Service Providers*
- Emergency Operations*

Business operations can be interrupted for a wide variety of reasons and to many different degrees. Whether it be a major natural disaster, cyber attack, or something as simple as a localized power outage, a business needs to be resilient. Business resiliency is developed through careful analysis, planning, and practices.

Our BC/DR Service is based on our proprietary Adaptive Risk Model (ARM) methodology. The Cyturus ARM identifies deficiencies, measures potential business impact, and recommends prioritized remediation actions across the entire enterprise. This service can be ingested into the Cyturus ARM framework for deeper examination and lateral impact as part of a future holistic engagement.

Is your organization properly prepared for the next critical business interruption? Do you need expert guidance in evaluating a current business interruption? Contact us to discuss your level of disaster preparedness and discover how to implement a framework and set of processes that will guide your organization in recovery from a disaster and to resume routine business operations.
