

Creating Value Through Critical Cybersecurity Services

## MANAGED SECURITY SERVICES

### Managed Endpoint Protection

Antivirus alone, is dead. Our Managed Endpoint Protection (MEP) utilizes Advanced Threat Protection (ATP) to continuously monitor and analyze file and process activity to quickly detect, isolate, and remediate threats. Our solution provides protection throughout the threat continuum:

- **Prevention** - Stopping threats at the earliest possible time using advanced technologies such as Machine Learning Analysis and Polymorphic Threat Detection.
- **Detection** - Continuously monitoring endpoints to help detect new and unknown threats through Indicators of Compromise (IoC) and Low Prevalence Executables.
- **Response** - The ability to easily identify infected endpoints and take decisive action through Cloud-based Sandboxing and Endpoint Isolation.

### [ DATA PROTECTION ]

### Customer Experience

BAMCIS Cybersecurity engages proactively with customers, learning their business, taking initiative, and striving every day to be a true partner. Our approach is to offer continuous value. Our team has significant cybersecurity experience and understand the environments in which our customers operate. We work in small teams and focus on delivering practical, technologically innovative solutions that are centered on the customer experience. These are hallmarks of what differentiates us from our competitors. We believe that this is critical in driving the outcomes our customers desire.
