Health inspections

State inspectors conduct yearly health and safety inspections of nursing homes for compliance with Medicare and Medicaid regulations. A nursing home may also be inspected based on a complaint submitted by a resident (or other individual), or based on a facility's self-reported incident. Nursing homes are also inspected for compliance with infection control and prevention standards.

Staffing

Higher staffing levels and lower staffing turnover in a nursing home may mean higher quality of care for residents. Hours worked by different types of staff are reported by nursing homes, and are used to calculate a ratio of staffing hours per resident per day and the staffing turnover rate. Hours per resident per day describe the average amount of time staff are available to spend with each resident each day. Staff turnover describes how many staff stop working at the facility within a given year.

Registered Nurse (RN) staffing

Registered nurses (RNs) are licensed healthcare professionals who are responsible for the coordination, management and overall delivery of care to the residents. Some nursing home residents who are sicker than others may require a greater level of care, and nursing homes that have more RN staff may be better able to meet the needs of those residents.

Staff turnover

Staff turnover is the percent of nursing staff or number of administrators that stop working in a facility within a given year. Low turnover indicates that facilities generally retain their staff for longer periods of time. Lower turnover is preferred because staff who work in facilities for longer periods of time may become more familiar with the residents and the facility's operating procedures.

Quality measures rating

Below average

Medicare assigns the star rating based on data from a select set of clinical data measures. More stars means better performance in certain areas of care.

Short-stay quality measures

Much below average

The short-stay quality measures rating reflects the average level of a nursing home's performance in certain areas of care for those who stayed in a nursing home for 100 days or less or are covered under the Medicare Part A Skilled Nursing Facility (SNF) benefit, and whose typical goal is to improve their health status so they can return to their previous setting, like their home.

COVID-19 vaccination rates

COVID-19 vaccinations can be extremely effective at protecting nursing home residents from COVID-19. The information below shows the percent of residents and staff who are up to date with their vaccines, along with the state and national rates. Someone is up to date with their COVID-19 vaccines when they have received all doses recommended for them, when eligible. People are protected best from COVID-19 when they stay up to date with the recommended vaccines. When higher levels of residents and staff are up to date with their vaccines, the level of protection from COVID-19 increases for all residents, staff, and visitors.

Note: On January 1, 2024, the Centers for Disease Control (CDC) changed the way it collects data to calculate the percent of staff who are up to date with their COVID-19 vaccination. It may take facilities some time to adapt to the new methodology. As a result, the reported percent of staff who are up to date with their COVID-19 vaccination should be viewed with caution over the next few weeks. Contact facilities directly for more information on their vaccination levels.

Penalties

When a nursing home gets a serious health or fire safety citation, or fails to correct a citation for a long period of time, this can result in a penalty. A penalty can be a fine against the nursing home or a denied payment from Medicare. Medicare reports penalties at the federal level, but you can also search for penalties under state law.
