

# Dr Royal Raymond Rife 16 May 1888 – 5 August 1971

## Who was Royal Raymond Rife and What did he discover that got him killed?

Dr. Rife is the primary reason this site exists. His understanding of radio frequency modulation laid the footwork for advancing medicine so much so that it ultimately cost him his life. This website pays tribute to his life's research and accomplishments.

## Dr. Royal Raymond Rife (May 16, 1888 – August 5, 1971)

There are several different radio frequency generators and amplifiers available for frequency healing. Most of these machines are similar to each other, but all variations honor Dr. Royal Raymond Rife, who was the pioneer of this field. The machines are referred to as Rife machines. A "Rife machine" is a research instrument invented by Dr. Royal Raymond Rife.

A Rife machine is an electronic device which emits audio and/or radio waves applied in some fashion to an individual with the intent of bettering the individual's health. Rife learned that different species of life have their own electromagnetic 'signature', or pattern of oscillation (frequency) based on its individual genetic chemical blueprint. It's different for all. Dr. Rife used a high-powered microscope he built that could magnify a cell sample up to 60,000 times visibility he could observe cell oscillation or different viruses, bacteria, and parasites in a living medium. He spent years documenting the specific harmonic sideband frequency that caused cells to resonate. The sample could be destroyed by intensifying those frequencies amplitude until chemical changes occur within the pathogen and it would devitalize and die. Sometimes they could see them literally explode... like an intense musical note that can shatter a wine glass. All while healthy cells surrounding the parasite signature remained unharmed.

In 1923 Dr. Rife purchased the Colin B. Kennedy Company equipment. Dr. Rife used the Kennedy Model 110, 220 and 281 in his work on micro-organisms. The Model 110 had the broadest frequency range of these three models. It went from 12,000 Hertz to about 2 million Hertz. The frequencies that Dr. Rife used with the Kennedy equipment ranged from 139,200 Hertz for Anthrax to 1,604,000 (adjusted to 1,607,450 Hertz in 1936) for the BX cancer virus.

## Royal Raymond Rife's 15 minutes of Fame

In 1934, Dr. Royal Rife was given a number of human test subjects. This group was from the Pasadena County Hospital and all of them had terminal cancer. They had been essentially left to die because no more could be done for them by the cancer industry. Under the supervision of a Special Medical Research Committee of pathologists and oncologists from the University of Southern California (USC), the patients were brought to Rife's laboratory in San Diego to undergo his unique experimental treatment. It was their job to expertly document the progress of the patients over a 90-day period during treatment. They reported astounding results: 86.5% of the patients were completely cancer free. Another 13.5% received an adjusted treatment (more potent) for an additional 30 days and then they also became 100% cancer-free.

In conclusion Rife's technology was reported to be 100% effective against terminal (stage IV) cancer in all of the participants.

On the eve of a press conference to announce the results of the 1934 study on Rife's cancer therapy, Dr. Milbank Johnson, former president of the Southern California AMA, was fatally poisoned and his papers vanished. Also, after a failed attempt by Morris Fishbein to buy the rights to Rife's healing instrument for the medical drug industry, Rife's laboratories were set on fire and ruined.

Dr. Nemes who had replicated a part of Rife's work died in an inexplicable fire along with the destruction of all his research papers. A similar fire also destroyed the Burnett Lab, which was validating Rife's work.

Royal Rife was murdered by fatal combination of an "accidental" lethal dose of Valium and alcohol in 1971 at the Grossmont Hospital after a heart attack.
