Marijuana Facts

All the research done on youth marijuana use has proven it's harmful and no studies of today's high-potency marijuana have shown any benefit for youth.

Today's marijuana has been cultivated to be much stronger, **15–30%* THC** and sometimes more(it's like smoking several old-school joints at one time).

Old-school marijuana used to contain equal amounts of CBD and THC, which was a protective factor. Today's marijuana contains almost **no CBD**, just THC.

Today's chemists invented new marijuana projects that didn't exist in the past. **Raw THC is extracted from marijuana using a machine and turned into concentrates.**

These products, such as wax, shatter, and crystal (called dabs), can be **60–99%* pure THC**. Extracted THC can be further distilled into oils, which can be **80–99%* pure**. These oils can be vaped or put into edibles.

Marijuana might start as a **plant**, but these products are created in a lab, and there's **nothing natural** about them!
