

X ***PEDITION***[®]
ARCHERY

XPERIENCE PERFECTION™

2018

Trophies are collected based upon merit. Your equipment has to be an extension of who you are and deliver at what you do. Maybe the trophies you earn are the result of X rings and hours of repetition on the practice range. Maybe your trophies are wrapped in freezer paper or are measured in points or inches. In the end, you understand that the price you pay is only one factor in your satisfaction in your gear. Timeless performance, unerring quality, and durability are the keys to lasting satisfaction

ATR™

PERFEXION XL

It was only a matter of time before the Xpedition team turned its focus on the crucible of archery precision, the Target market. The Perfexion XL brings to bear the full scope of our aerospace pedigree to influence archery design and unparalleled precision manufacturing. The Perfexion XL's patent pending PXT hybrid cam design from the most prolific cam designer in modern history, and the results are breathtaking. The PXT dual limb stop hybrid cam has an unprecedented 6" of draw length adjustment on one base cam, features ½" modular draw adjustment and the Xpedition signature adjustability. The Perfexion XL is fast enough for 3D in spite of its 8" plus brace height, yet still prioritizes the smooth draw that target archer require for long days at the range. The Perfexion XL's rigid riser defies flex and recovers with the consistency that had previously been reserved for shoot through designs. Form follows function, so the Perfexion XL has clean lines and rich target colors that scream quality. At the end of the day, it is engineered and assembled to make scores climb and X rings easier to hit. Make an investment in your archery future and set your goals to Xperience Perfection™. The Xpedition Perfexion XL, a pedigree of performance.

At Xpedition Archery, we build purpose driven products for the most discriminating archers. Our goal transcends the “new models are incentive to buy” mentality so common in today’s retail environment.

Xpedition Archery builds purpose driven products that define a brand. That brand, the Xpedition Archery brand, needs to be a trusted partner for the long haul. In a sea of products built on market hype and theoretical advantage, we build only the best, for those that have expectations of the best. Most importantly, we do it with the pride and value that comes from Made in the USA, American craftsmanship. Make every pursuit, an Xpedition.

BADLANDS APPROACH

In life, there are very few absolutes, but there are a few common traits that are inherent to greatness. The first is the desire to establish a reputation for quality that is exemplified in your products. The second is the confidence to step out of the constraint of conventional thinking. When two companies like Badlands and Xpedition Archery collaborate on something, each company is placing a vote of confidence in the other. Both entities entrust in the other to deliver on their end and at the same time, neither party can be willing to be the weak link. For 2018, Xpedition Archery is proud to provide the Badlands Approach pattern on a premium bow. Xpedition Archery is the first to accurately reproduce the color, size, and detail with the durability and colorfastness that can only be achieved by using dye sublimation. This will ensure that the Badlands Approach Pattern on your Xpedition bow will perform with the rest of your Badlands Approach gear. Plan your Approach. Make your next hunt, an Xpedition.

XPLORER SS

Xpedition launched itself into the short axle to axle market in 2017 with the Xplorer SS. The Xplorer SS set a new standard in high performance, short axle to axle bows by being first compact bow to combine speed and accuracy in the same package. This year, the only thing we could do to improve it, was to incorporate our new super smooth PXT hybrid to accommodate shooters with draw lengths as short as 22". When you redefine a category, there is no need to reinvent the wheel.

DENALI

The very name conjures visions of one of the most iconic landscape features in North America. The “High One” or The “Great One” as interpreted in the native languages, the 2017 Denali set a benchmark for mid axle to axle length bows. Like a supercharged luxury sedan, the Denali just blew the doors off anything in its class, while delivering the smooth shooting and handling characteristics only a longer bow can provide. For 2018, we deliver those same characteristics to more short draw archers by adding the PXT hybrid cam as an option for archers with draw lengths as short as 23”. Hunting, 3D, spots... the Denali will handle them all in style.

XCURSION

The Xpedition legacy of speed was firmly cemented in 2014 with the ground breaking Xcentric. Over the years we made incremental changes that increased speed. We added models with single cams and added higher brace height versions for those with longer draws or a preference for more forgiving brace heights. For 2018, the Xcursion series comes full circle. All 2018 Xcursions can be ordered with Xpedition's Patent Pending XS Plus or PX³ high performance hybrid cam variants for unparalleled accuracy in a speed bow. The Xcursion 6 and Xcursion 7 will also be offered with our proven XP-1 single cam. With its silky smooth draw, Dual Plane Riser bridging for vibration control, ease of tuning and IBO speed ratings crowding 340 fps the 2018 Xcursion XP will continue to define performance in the premium single cam bow category for years to come. 2 risers, 3 cams, unlimited satisfaction.

ATR[®]

In our constant quest to improve, a series of events began to unfold. A small change in manufacturing provided insight into a more consistent design. Then some high speed camera footage allowed an engineer to change a cam design to make a cam recover more consistently. Finally, string materials evolved and added another piece to the puzzle that allowed a previous roadblock to become a reality. Now, any concern can go away. For 2018 all factory cables, on all models, at all draw lengths and peak weights will come served with a micro diameter spectra material at the point of contact with the ATR. Rest assured that revolutionary simplicity will continue to perform for many years to come.

ALTER™

STRINGS & CABLES

Once again, Lightning Archery will be the supplier of our factory bowstrings and cables. The harness on your Xpedition bow will also be made of BCY Mercury for the ultimate stability and consistency in an OEM harness.

CAMS

XS PLUS

The ultimate in smooth drawing performance hybrid cams for the most common draw lengths. This is the signature cam for Xpedition.

PX³

The go to choice for top performance in shorter draw lengths, the PX³ hybrid closes the gap in speed for the short draw archer.

PXT

The PXT hybrid claims the perfect consistency that only a smooth drawing hybrid design can deliver. Designed specifically for the Perfexion XL but also gives other bows the flexibility to fit the shortest draw length adults and teens.

XP-1

Single cam simplicity, with a huge draw length range and a silky draw cycle for arguably the easiest cam system to shoot and maintain.

AN  **PEDITION.**

Deep down, we are all the same. We are Hunters, Archers, Conservationists, Fathers, Sons, Mothers, Daughters, Grandparents and Friends. The common ties we share are rooted in Tradition. The trucks you have driven, the people you were with, the equipment you used, and the trophies on your mantle are all etched in your memories. You name your favorite tree stand or mountain saddle based on personal history with the landscape. The animals you pursue are individuals. You know them by name. You have history with them. They inject themselves in your mind to the point of compulsive distraction. For some, it is simply an annual activity that they participate in. For others, like you, everything is an extension of the lifestyle that defines you.
