 - 4m @ 5.18g/t Au from 48m (CGRC008 – 20.7 GM) Pearl
 - 4m @ 2.43g/t Au from 88m (CGRC003 – 9.7 GM) Golden Sunset

 - Preliminary interpretation of the survey data identified eight low level anomalies

Gunpowder Creek Project – Maiden RC Drill Program

The maiden drill program was designed to follow-up the high-grade gold samples collected at 3 of the 26 historic gold workings situated along a north-north-west trending May Downs Fault¹.

The drilling program returned excellent gold results validating the high-grade surface samples collected from the historic workings.

Results from Gunpowder Creek Drilling

- 5m @ 5.70g/t Au from 108m (CGRC002 – 28.5 GM) Golden Sunset
- 4m @ 5.18g/t Au from 48m (CGRC008 – 20.7 GM) Pearl
- 4m @ 2.43g/t Au from 88m (CGRC003 – 9.7 GM) Golden Sunset
- 5m @ 1.29g/t Au from 97m (CGRC004 – 6.4 GM) Golden Sunset
- 2m @ 2.43g/t Au from 153m (CGRC004 – 4.9 GM) Golden Sunset

Interpretation of the available drillhole data along with surface indications suggests that the gold intercepts are related to fissure veins that strike approximately 50° and dip steeply to the south-east. The implication of the interpretation is that the fissure

veins form in a dextral strike-slip structure which is represented by the May Downs Fault, and they should repeat in that same orientation (figure 6).

The company plans to carry out additional follow up RC drilling at the Gunpowder Creek Project as soon as practical to do so. The drilling completed was oriented towards the east, the new interpretation suggests that the optimal drill orientation to test the mineralised fissure veins is towards the north-west and this interpretation also opens up the potential for multiple fissure veins parallel to that identified at Golden Sunset.

Nymagee Project Airborne Gravity Survey

Coolabah Metals Limited's Nymagee Project was incorporated into a larger regional airborne gravity survey conducted by the neighbouring tenement holders (Aurelia Metals Limited ASX:AMI)⁴.

The airborne gravity survey covered approximately one third of the Nymagee Project tenements, and the whole of the Dywat Exploration License (EL8657), and smaller portions of EL8638 and EL8785 totalling 169 square kilometres.

The Hera, Nymagee and Federation Deposits display strong positive gravity anomalies, interpreted to be related to alteration around the mineralisation.

During the quarter processing and interpretation of the airborne gravity data continued.
