

## SWC4: 4 PLY SOLID WOVEN COTTON

|                                    |                                                                          |
|------------------------------------|--------------------------------------------------------------------------|
| <b>Applications</b>                | General Conveying, FDA Approved Conveying, Corrugated Box Manufacturing, |
| <b>Material</b>                    | 100% Cotton                                                              |
| <b>Weight</b>                      | 3.15 KG/M2 / 0.65 LBS/FT - +/- 10%                                       |
| <b>Elongation</b>                  | Up to 6%                                                                 |
| <b>Operating Temperature</b>       | -10 - 120° C / 15 - 250° F                                               |
| <b>Thickness</b>                   | 4.5 MM / 0.177 IN - +/- 10%                                              |
| <b>Minimum Pulley Diameter</b>     | 100 MM / 4 inches                                                        |
| <b>Recommended Joining Methods</b> | U2SS, RS125, Butt & Sewn, Step & Sewn                                    |
| <b>Air Permeability</b>            | Not Recommended                                                          |
| <b>Finish</b>                      | Spun Fabric, Non-Slip                                                    |
| <b>Stock Widths</b>                | 6, 12, 18, 24, 36, 48                                                    |

### Representative sample of SWC4

**Product Notes:** Solid Woven Cotton belts are manufactured and stocked in common widths. Stock belts can be cut down and overcast to custom widths for individual orders at Upson Maybach's workshop. Woven to width special productions are available with 500-foot productions. Woven fabrics are dynamic and can shrink and expand with changes in the environment.
