| Preface 1: Purpose . . . . .  | 2         |
| Preface 2: Background and Dedication . . . . .                      | 5         |
| <b>1 Introduction: From Linear Algebra to Linear Analysis</b>       | <b>15</b> |
| 1.1 Three variations of Fourier analysis . . . . .                  | 16        |
| 1.1.1 Fourier Series . . . . .                                      | 16        |
| 1.1.2 The Discrete Fourier Transform . . . . .                      | 17        |
| 1.1.3 The Continuous Fourier Transform . . . . .                    | 18        |
| 1.2 Motivations . . . . .   | 18        |
| 1.2.1 Exploration and Understanding . . . . .                       | 19        |
| 1.2.2 Manipulation . . . . .  | 20        |
| 1.2.3 Compression . . . . .   | 21        |
| 1.3 Linear Algebra, Linear Analysis, and Fourier Analysis . . . . . | 22        |
| 1.3.1 The Dot Product, Inner Product, and Orthogonality . . . . .   | 22        |
| 1.3.2 Eigenvectors and Eigenvalues in Linear Algebra . . . . .      | 25        |
| 1.3.3 Orthogonal Diagonalization . . . . .                          | 27        |
| 1.3.4 Diagonalization in Linear Analysis: Eigenfunctions . . . . .  | 27        |
| 1.3.5 Fourier Analysis . . . . .                                    | 28        |
| 1.3.6 Notational Differences . . . . .                              | 29        |
| <b>2 Basic Fourier Series</b>                                       | <b>31</b> |
| 2.1 Fourier Series on $L^2[a, b]$ . . . . .                         | 31        |
| 2.1.1 Calculating a Fourier Series . . . . .                        | 34        |
| 2.1.2 Periodicity and Equality . . . . .                            | 38        |
| 2.1.3 Problems and Exercises . . . . .                              | 40        |
| 2.2 Orthogonality and Hilbert Spaces . . . . .                      | 41        |
| 2.2.1 Orthogonal Expansions . . . . .                               | 44        |
| 2.2.2 Problems and Exercises: . . . . .                             | 46        |
| 2.3 The Pythagorean Theorem . . . . .                               | 46        |
| 2.3.1 The Isometry between $L^2[a, b]$ and $l^2$ . . . . .          | 48        |
| 2.3.2 Complex Notation . . . . .                                    | 50        |
| 2.3.3 Estimating Truncation Errors . . . . .                        | 53        |
| 2.3.4 Problems and Exercises: . . . . .                             | 56        |
| 2.4 Differentiation and Convergence Rates . . . . .                 | 57        |
| 2.4.1 A Quandary between Calculus and Fourier Analysis . . . . .    | 57        |

|          |  |           |
|----------|--|-----------|
| 2.4.2    | Derivatives and Rates of Decay . . . . .                                       | 58        |
| 2.4.3    | Fourier Derivatives and Induced Discontinuities . . . . .                      | 61        |
| 2.4.4    | Problems and Exercises: . . . . .  | 62        |
| 2.5      | Sine and Cosine Series . . . . .   | 63        |
| 2.5.1    | Problems and Exercises: . . . . .  | 67        |
| 2.6      | Perhaps Cosine Series Only . . . . .   | 68        |
| 2.6.1    | Induced Discontinuities vs. True Discontinuities . . . . .                     | 70        |
| 2.6.2    | Problems and Exercises: . . . . .  | 71        |
| 2.7      | Gibb's Ringing Phenomenon . . . . .  | 72        |
| 2.7.1    | Problems and Exercises . . . . .   | 73        |
| 2.8      | Convolution and Correlation . . . . .  | 74        |
| 2.8.1    | A couple of classic examples . . . . .   | 76        |
| 2.8.2    | Problems and Exercises: . . . . .  | 76        |
| 2.9      | Chapter Project: . . . . .   | 79        |
| 2.10     | Summary of Expansions: . . . . .   | 80        |
| <b>3</b> | <b>The Discrete Fourier Transform</b>  | <b>83</b> |
| 3.1      | The Fourier Matrix . . . . .   | 84        |
| 3.1.1    | Orthogonality of the Fourier Matrix . . . . .                                  | 85        |
| 3.2      | The Complex Nth roots of unity and their structure . . . . .                   | 87        |
| 3.2.1    | Problems and Exercises: . . . . .  | 87        |
| 3.2.2    | The roots of unity and frequency . . . . .                                     | 89        |
| 3.2.3    | Making the Fourier Matrix Understandable . . . . .                             | 90        |
| 3.2.4    | Problems and Exercises: . . . . .  | 91        |
| 3.2.5    | Group structure of the roots of unity . . . . .                                | 92        |
| 3.2.6    | Subgroups and Coset Representations . . . . .                                  | 94        |
| 3.2.7    | Problems and Exercises: . . . . .  | 95        |
| 3.3      | The Fast Fourier Transform . . . . .   | 95        |
| 3.3.1    | Speed Enabling Algorithm . . . . .   | 96        |
| 3.3.2    | The simplest examples: $F_2$ , $F_4$ and $F_8$ . . . . .                       | 96        |
| 3.3.3    | The FFT in the Classic Case $N = 2^q$ . . . . .                                | 100       |
| 3.3.4    | The FFT when $N = N_1 N_2$ . . . . .   | 105       |
| 3.3.5    | Problems and Exercises: . . . . .  | 106       |
| 3.4      | Discrete Convolution and Correlation . . . . .                                 | 107       |
| 3.4.1    | Circulant Toeplitz Matrices . . . . .  | 109       |
| 3.5      | Applications of Convolution and Correlation . . . . .                          | 110       |
| 3.5.1    | Derivatives via Convolution . . . . .  | 111       |
| 3.5.2    | Averaging . . . . .  | 114       |
| 3.5.3    | Narrowband and Nonlinear filtering . . . . .                                   | 115       |
| 3.5.4    | Matched Filtering . . . . .  | 118       |
| 3.5.5    | Problems and Exercises: . . . . .  | 120       |
| 3.6      | Computing Sine and Cosine Expansions Using the FFT: Com-<br>pression . . . . . | 121       |
| 3.6.1    | Cosine expansions . . . . .  | 121       |
| 3.6.2    | Sine expansions . . . . .  | 123       |
| 3.6.3    | Piecewise Cosine and Sine expansions . . . . .                                 | 123       |

|          |  |            |
|----------|--|------------|
| 3.6.4    | Problems and Exercises: . . . . .  | 124        |
| 3.7      | Chapter Project . . . . .  | 124        |
| <b>4</b> | <b>The Fourier Transform</b>   | <b>127</b> |
| 4.1      | From Fourier Series to the Fourier Transform . . . . .                     | 127        |
| 4.2      | The Fourier Isometry from $L^2(\mathbb{R})$ to $L^2(\mathbb{R})$ . . . . . | 130        |
| 4.2.1    | Problems and Exercises: . . . . .  | 131        |
| 4.3      | The Basic Theorems of Fourier Analysis . . . . .                           | 132        |
| 4.3.1    | Differentiation . . . . .  | 132        |
| 4.3.2    | Translation . . . . .  | 133        |
| 4.3.3    | Convolution and Correlation . . . . .                                      | 134        |
| 4.3.4    | Dilation and Uncertainty . . . . .   | 138        |
| 4.3.5    | The Fourier transform of a Gaussian . . . . .                              | 142        |
| 4.3.6    | Problems and Exercises: . . . . .  | 143        |
| 4.4      | The Inverse Transform . . . . .  | 143        |
| 4.4.1    | Proving the Fourier Inversion Formula . . . . .                            | 143        |
| 4.4.2    | Problems and Exercises: . . . . .  | 145        |
| 4.5      | Partition of Unity . . . . .   | 146        |
| 4.6      | Revisiting Gibbs' ringing . . . . .  | 147        |
| 4.6.1    | Problems and Exercises: . . . . .  | 149        |
| 4.7      | Suggested Test Review: . . . . .   | 151        |
| <b>5</b> | <b>Sampling and Interpolation</b>  | <b>153</b> |
| 5.1      | The Shannon Sampling Theorem . . . . .                                     | 154        |
| 5.1.1    | Recalling Polynomial Interpolation . . . . .                               | 158        |
| 5.1.2    | Shannon's Theorem: Advantages and Disadvantages . . . . .                  | 158        |
| 5.2      | Advanced Interpolation Theory . . . . .                                    | 160        |
| 5.2.1    | Basic Ideas . . . . .  | 160        |
| 5.2.2    | Oversampling and Adaptive Windows . . . . .                                | 162        |
| 5.2.3    | Interpolating Window Functions . . . . .                                   | 164        |
| 5.2.4    | Approximate Window functions: . . . . .                                    | 167        |
| 5.2.5    | Problems and Exercises: . . . . .  | 170        |
| 5.3      | Aliasing . . . . .   | 170        |
| 5.3.1    | Anti-Aliasing Filters . . . . .  | 172        |
| 5.3.2    | Problems and Exercises: . . . . .  | 173        |
| 5.4      | Numerical Computation of the Shannon Series . . . . .                      | 174        |
| 5.4.1    | Example 1: Exact Interpolation . . . . .                                   | 174        |
| 5.4.2    | Example 2: Approximate Interpolation . . . . .                             | 176        |
| 5.4.3    | Problems and Exercises: . . . . .  | 178        |
| 5.5      | Chapter Project: . . . . .   | 179        |
| <b>6</b> | <b>Digital Communications</b>  | <b>181</b> |
| 6.1      | Introduction and Basic Terms . . . . .                                     | 181        |
| 6.1.1    | Definitions from Communications . . . . .                                  | 183        |
| 6.2      | Modulation . . . . .   | 185        |
| 6.2.1    | Analogue vs. Digital . . . . .   | 185        |

|          |  |            |
|----------|--|------------|
| 6.2.2    | AM vs FM . . . . .   | 186        |
| 6.2.3    | RZ vs. NRZ . . . . .   | 186        |
| 6.3      | The Eye Diagram . . . . .  | 188        |
| 6.3.1    | Interference . . . . .   | 189        |
| 6.4      | Fourier Constraints . . . . .  | 193        |
| 6.4.1    | Uncertainty, Dilation, and ISI . . . . .                             | 193        |
| 6.4.2    | Uncertainty, Dilation, and CCI . . . . .                             | 194        |
| 6.5      | Statistics and Matched Filtering . . . . .                           | 195        |
| 6.5.1    | Gaussian White Noise . . . . .                                       | 198        |
| 6.5.2    | Averaging Noise . . . . .  | 200        |
| 6.5.3    | The Matched Filter . . . . .   | 201        |
| 6.5.4    | Transmitter and Receiver Details . . . . .                           | 204        |
| 6.5.5    | Chapter Project: . . . . .   | 205        |
| <b>7</b> | <b>Radar Processing</b>  | <b>207</b> |
| 7.1      | Range and Velocity Measurements . . . . .                            | 207        |
| 7.1.1    | Range Measurements . . . . .   | 207        |
| 7.1.2    | Simple Range Resolution . . . . .                                    | 208        |
| 7.1.3    | Maximum Unambiguous Range . . . . .                                  | 209        |
| 7.1.4    | Velocity Estimation and Resolution . . . . .                         | 209        |
| 7.2      | Radar Range Equation . . . . .                                       | 210        |
| 7.2.1    | Problems and Exercises: . . . . .                                    | 212        |
| 7.3      | Signal to Noise Management in Radar . . . . .                        | 213        |
| 7.3.1    | Matched Filter . . . . .   | 213        |
| 7.3.2    | Signal Averaging . . . . .   | 214        |
| 7.3.3    | Heterodyne Receivers . . . . .                                       | 215        |
| 7.3.4    | IF Band-Pass Filters . . . . .                                       | 217        |
| 7.3.5    | Problems and Exercises: . . . . .                                    | 219        |
| 7.4      | Revisiting Range Resolution: Uncertainty and Bandwidth . . . . .     | 220        |
| 7.5      | Doppler Measurement and Resolution . . . . .                         | 222        |
| 7.5.1    | Doppler from a moving Target . . . . .                               | 222        |
| 7.5.2    | Doppler from a moving Source . . . . .                               | 224        |
| 7.5.3    | Doppler Resolution . . . . .   | 225        |
| 7.5.4    | Problems and Exercises: . . . . .                                    | 227        |
| 7.5.5    | Chapter Project: . . . . .   | 228        |
| <b>8</b> | <b>Image Processing</b>  | <b>229</b> |
| 8.1      | Fourier Analysis in $\mathbb{R}^n$ . . . . .                         | 229        |
| 8.2      | Edge Detection . . . . .   | 230        |
| 8.2.1    | Horizontal and Vertical Edges: Standard Approximations . . . . .     | 232        |
| 8.2.2    | Exact Partial Derivatives and Directional Derivatives . . . . .      | 236        |
| 8.3      | Interpolation: High Definition TV and beyond . . . . .               | 236        |
| 8.3.1    | Revisiting Shannon and Advanced Interpolation . . . . .              | 236        |
| 8.3.2    | Regaining a .jpg image in matlab: Normalization and Format . . . . . | 241        |
| 8.4      | Compression . . . . .  | 241        |

|           |  |            |
|-----------|--|------------|
| 8.4.1     | Shannon Sampling, Compression and Interpolation . . . .                  | 241        |
| 8.4.2     | Fourier Truncation . . . . .   | 242        |
| 8.4.3     | Periodization and Fourier Truncation . . . . .                           | 244        |
| 8.4.4     | Blocking, Compressing, and Smoothing Images . . . . .                    | 246        |
