

QUALITY

All of our CBD products are grown and extracted in accordance with the strict guidelines of the Alabama Department of Agriculture. Each and every product that leaves the facility must be third-party tested to ensure consistency and quality.

”

Everyone should have access to affordable, high quality CBD oil.

ALABAMA HEMP

Compton Place Farms grows its hemp in the rich soils of the Blackbelt region. We grow and harvest our hemp without the use of pesticide to produce a wholesome, all natural product.

HEALTH

HOW CBD WORKS IN YOU

A little known fact is that our bodies naturally produce cannabinoid receptors; CB1 and CB2. CB1 and CB2 receptors are found throughout our body and play a minor role in maintaining our overall health & well-being.

CB1

- Memory and learning
- Creativity
- Motor coordination
- Appetite
- Anxiety
- Stress levels

These receptors are collectively known as the Endocannabinoid System (ECS) and help our bodies achieve homeostasis

CB2

- Pain management
- Immune system regulation
- Skeletal System regulation
- Promotion of bone growth

CB1 receptors are primarily located in the brain, spinal cord and central nervous system. They have been

found to help with memory processing, motor regulation, mood, and natural sleep cycles.

CB2 receptors are found throughout our immune system, skeletal system and our skin.

When these receptors are activated, they stimulate a response that fights inflammation, which can help in reducing discomfort and minimizing damage to tissues.

Tinctures

Our tinctures are proudly made with only the finest Alabama grown hemp and organic MCT oil. Upheld to the highest standards of quality via small batch runs, allowing us to carefully control each step of the way. Twice the potency, half the price equals all-natural goodness.

Gummies

- Natural Flavoring
- Vegan Ingredients
- Convenient & Consistent

Softgels

Our softgels consist of CBD oil combined with MCT derived from organic coconut oil. MCT, which stands for medium chain tryglycerides, acts as a carrier oil and is more easily digested and absorbed in your body when compared to other oils. By breaking down easily, MCT provides instant energy as well as a supply of ketons, which boosts metabolism.

To fully understand what CBD is, you must first know the differences between hemp and cannabis. Both plants are similar in structure, smell and looks, but the difference lies within.

Cannabis contains large amounts of THC, which gives users the traditional intoxication associated with marijuana. Hemp (the plant we use) contains large amounts of CBD, which is non-intoxicating and has many potential health benefits.

CANNABINOIDS

DIFFERENCES

CBD

- Non-Intoxicating
- Targets pain, anxiety and stress
- Legal in all 50 states

THC

- Intoxicating
- Helps with mental health, sleep and chemical production
- Only legal in select states

D8 THC

- Very similar to THC
- Derived from hemp, instead of cannabis
- "Psychoactive" with "euphoric" feelings

WHAT IS CBD?
