CORONA = QUARREL: STUDENTS VS TEACHERS

As cases rise across the country, students and teachers have been forced to make use of online platforms, which have had their own consequences, headlined by communication issues.

A very recent example included a student, who faced the pointless wrath of a teacher, who was contradicting the words of another teacher, about the submission of crucial documents. As a result, confusion spread just as quickly as the coronavirus, leading to inconsistencies in the submission of documents. In addition, the father of the student in question, was called under false pretences, and there was an unnecessary disturbance in that student's household.

However, in this time of crisis the teachers cannot be held 100% accountable, as all such scenarios would have been avoided had it not been for the deadly virus.

This incident should be used as a learning experience for the future, and a better future is one in which teachers and students work in unity.
