SPECIAL PROJECT

GEMINI

WHAT IS SPECIAL PROJECT GEMINI

Special Project Gemini is a highly specialized task force of industry leaders, service providers and subject matter experts, strategically aligned to directly address the Defense Health Agencies (DHA) statement of objectives (SOO), J7 training requirements, and Department of Defense Instruction 1322.24 MEDICAL READINESS TRAINING.

To achieve the objectives set forth by the Department of Defense requires an all-hands-on deck team approach with a can-do attitude. Training our expeditionary warfighters, requires a team of professionals who are combat veterans, subject matter experts' medical advisors, live, virtual, constructive event production, and training experts. Complemented by the best of the very best AI, Unity, and Unreal Engine 5 developers @ TEAM GEMINI Software Factory.

Experience Collaborative Medicine

Why GAO Did This Study

DOD has over 73,000 active-duty enlisted medical personnel who must be ready to provide life-saving care to injured and ill servicemembers during deployed operations, using their wartime medical skills. Senate Report 116-48 accompanying a bill for the National Defense Authorization Act for Fiscal Year 2020 included a provision for GAO to review DOD's efforts to maintain enlisted personnel's wartime medical skills. This report examines, among other objectives, the extent to which (1) the military departments have defined, tracked, and assessed enlisted personnel's wartime medical skills, and (2) DOD has developed plans and processes to sustain these skills and assessed risks associated with their implementation. GAO analyzed wartime medical skills checklists and guidance; reviewed plans for skills sustainment; and interviewed officials from DOD and military department medical commands and agencies, and nine inpatient military medical treatment facilities.

The MHS currently faces several infrastructure challenges pertaining to learning and performance improvement. Currently, the MHS processes and systems-in-place have no ability to report enterprise-wide education, training, and human performance metrics. For example, across the Services and DHA, multiple training and education systems are used to collect data in different formats and methods. Training and education data is stored in systems like EMS, B-Line, and/or DTMS depending on the site. In many cases, this data is not standardized, centralized, or available for analysis. These isolated, disparate, stove-piped systems do not have sufficient connectivity and interoperability to provide data, information exchange, and analytics. This lack of MHS training data infrastructure results in a subpar ability to report enterprise-wide education, training, and human performance metrics. The MHS Total Learning Architecture (TLA) will be a cloud native System-of-Systems with an open architecture which will consist of connected state-of-the-art COTS and/or GOTS technology. The goal of TLA is to enhance interoperability between existing training and education learning management and delivery systems with the goal of providing an integrated system to standardize and centralize training and education data. TLA will integrate training and education data into a holistic system that can track learner progress and competence throughout their career. The system will ultimately provide an ability to track, deliver, and assess the effectiveness of training and education across the MHS enterprise, and facilitate state-of-the-art learning capabilities in concert with the DoD 2019 Digital Modernization Strategy. Customized filters and analytics will enable the discoverability of insights across the enterprise, revealing gaps and opportunities to connect operational goals and available training and education curricula. Data-driven recommendations can be provided that are optimized or standardized for appropriate and timely delivery across the learning continuum or linked to competency levels and readiness measures.

GAP ANALYSIS DEFICIENCIES

The military departments have not fully defined, tracked, and assessed wartime medical skills for enlisted medical personnel. The departments have defined these skills for 73 of 77 occupations. However, among other issues,

- The Army and the Air Force have not defined skills for numerous highly skilled subspecialties that require additional training and expertise, such as Army Critical Care Flight Paramedics. Subspecialty personnel are key to supporting lifesaving medical care during deployed operations.
- The Army does not consistently track wartime medical skills training for enlisted medical personnel in its official system.
- The military departments are not able to fully assess the preparedness of enlisted medical personnel because, according to officials, they have not developed performance goals and targets for skills training completion.

As a result, the military departments lack reasonable assurance that all enlisted medical personnel are ready to perform during deployed operations.

The Department of Defense (DOD) has not fully developed plans and processes to sustain the wartime medical skills of enlisted medical personnel. While the Defense Health Agency (DHA) has initiated planning efforts to assess how the military departments' three primary training approaches sustain readiness (see figure), these efforts will not fully capture needed information. For example, DHA's planned metrics to assess the role of military hospitals and civilian partnerships in sustaining readiness would apply to a limited number of enlisted occupations. As a result, DHA is unable to fully assess how each training approach sustains readiness and determine current and future training investments.

Recommendations for Executive Action

<u>Agency Affected</u>	<u>Recommendation</u>	<u>Status</u>
Department of the Army	The Secretary of the Army should ensure that the Commanding General, U.S. Army Medical Center of Excellence, takes corrective action to define wartime medical skills for enlisted medical subspecialties with an expeditionary role. (Recommendation 1)	The Army concurred with this recommendation. The Army has taken some steps to implement this recommendation. Specifically, in an October 2021 status update, the Army stated that action on this recommendation was underway with an estimated completion date of December 2022.
Department of the Air Force	The Secretary of the Air Force should ensure that the Surgeon General of the Air Force, in coordination with the Commander, Air Force Medical Readiness Agency, takes corrective action to define and implement wartime medical skills for enlisted medical subspecialties with an expeditionary role. (Recommendation 2)	The Air Force concurred with this recommendation. The Air Force has not yet implemented this recommendation. In an October 2021 status update, the Air Force outlined a series of steps it will take to address this recommendation, with an estimated completion date of September 2022.
Department of the Air Force	The Secretary of the Air Force should ensure that the Surgeon General of the Air Force, in coordination with the Commander, Air Force Medical Readiness Agency, establishes guidance that requires the development of wartime medical skills for current and future enlisted medical subspecialties with an expeditionary role. (Recommendation 3)	The Air Force concurred with this recommendation. The Air Force has taken some steps to implement this recommendation. Specifically, in an October 2021 status update, the Air Force stated that it will address this recommendation via an interim change to Air Force Instruction 41-106 and that action on this was underway. March 2022.
<u>Agency Affected</u>	<u>Recommendation</u>	<u>Status</u>
Department of the Army	The Secretary of the Army should ensure that the Commanding General, U.S. Army Medical Center of Excellence, takes corrective action to fully incorporate joint wartime medical skills into Army wartime medical skills checklists. (Recommendation 4)	The Army concurred with this recommendation. The Army has taken some steps to implement this recommendation. Specifically, in an October 2021 status update, the Army stated that action on this recommendation was underway with an estimated completion date of December 2022.
Department of the Air Force	The Secretary of the Air Force should ensure that the Surgeon General of the Air Force, in coordination with the Commander, Air Force Medical Readiness Agency, takes corrective action to fully incorporate joint wartime medical skills into Air Force wartime medical skills checklists. (Recommendation 5)	The Air Force concurred with this recommendation. The Air Force has not yet implemented this recommendation. In an October 2021 status update, the Air Force stated that it will complete a series of actions to implement this recommendation by September 2022.
Department of the Air Force	The Secretary of the Air Force should ensure that the Surgeon General of the Air Force, in coordination with the Commander, Air Force Medical Readiness Agency, issues guidance requiring the incorporation of joint wartime medical skills into Air Force checklists. (Recommendation 6)	The Air Force concurred with this recommendation. The Air Force has taken some steps to implement this recommendation. Specifically, in an October 2021 status update, the Air Force stated that it will address this recommendation via an interim change to Air Force Instruction 41-106 and that action on this was underway. Completion March 2022.

Training resources you can rely on

Strategic Operations Tactical Combat Care Cut Suit distributed exclusively by CAE Healthcare

- Practice treating the three primary causes of battlefield deaths: uncontrollable hemorrhage, airway compromise and tension pneumothorax
- Hyper-realistic to simulate extreme physical trauma
- Completely customizable and repairable, minimizing maintenance and recurring costs

CAE Ares emergency care manikin

- Built to withstand the rigors of emergency care team training
- Portable, lightweight and durable
- Reliable through repeated simulations to fulfill requirements in advanced life support, advanced cardiac life support and other emergency protocols.

USALearning Products and Services

USALearning Training and Human Capital service offerings include, but are not limited to, custom resident-based / faculty-centered training, course design, development, conversion, and delivery, as well as learning ecosystem design, development, implementation, secure FedRAMP and DoD Impact Level hosting, technical support, and maintenance of learning ecosystems.

USALearning, in support of agency customers, utilizes current and next generation learning technologies and environments; e.g., advanced learning analytics, artificial reality / virtually reality (ARVR), gaming, simulations, virtual environments, and learner records based on international learning specifications and standards such as Experience API (xAPI). The services can be grouped into two product lines, *Learning Ecosystem Support* and *Training Design, Development, and Support*. **Select an option below to learn more.**

Learning Ecosystem Support

USALearning provides integrated learning ecosystem solutions to meet complex agency/customer unique requirements, to include but not limited to: eLearning and talent management systems implementation, cybersecurity support, and software license acquisition.

[Learn More](#)

Training Design, Development, and support

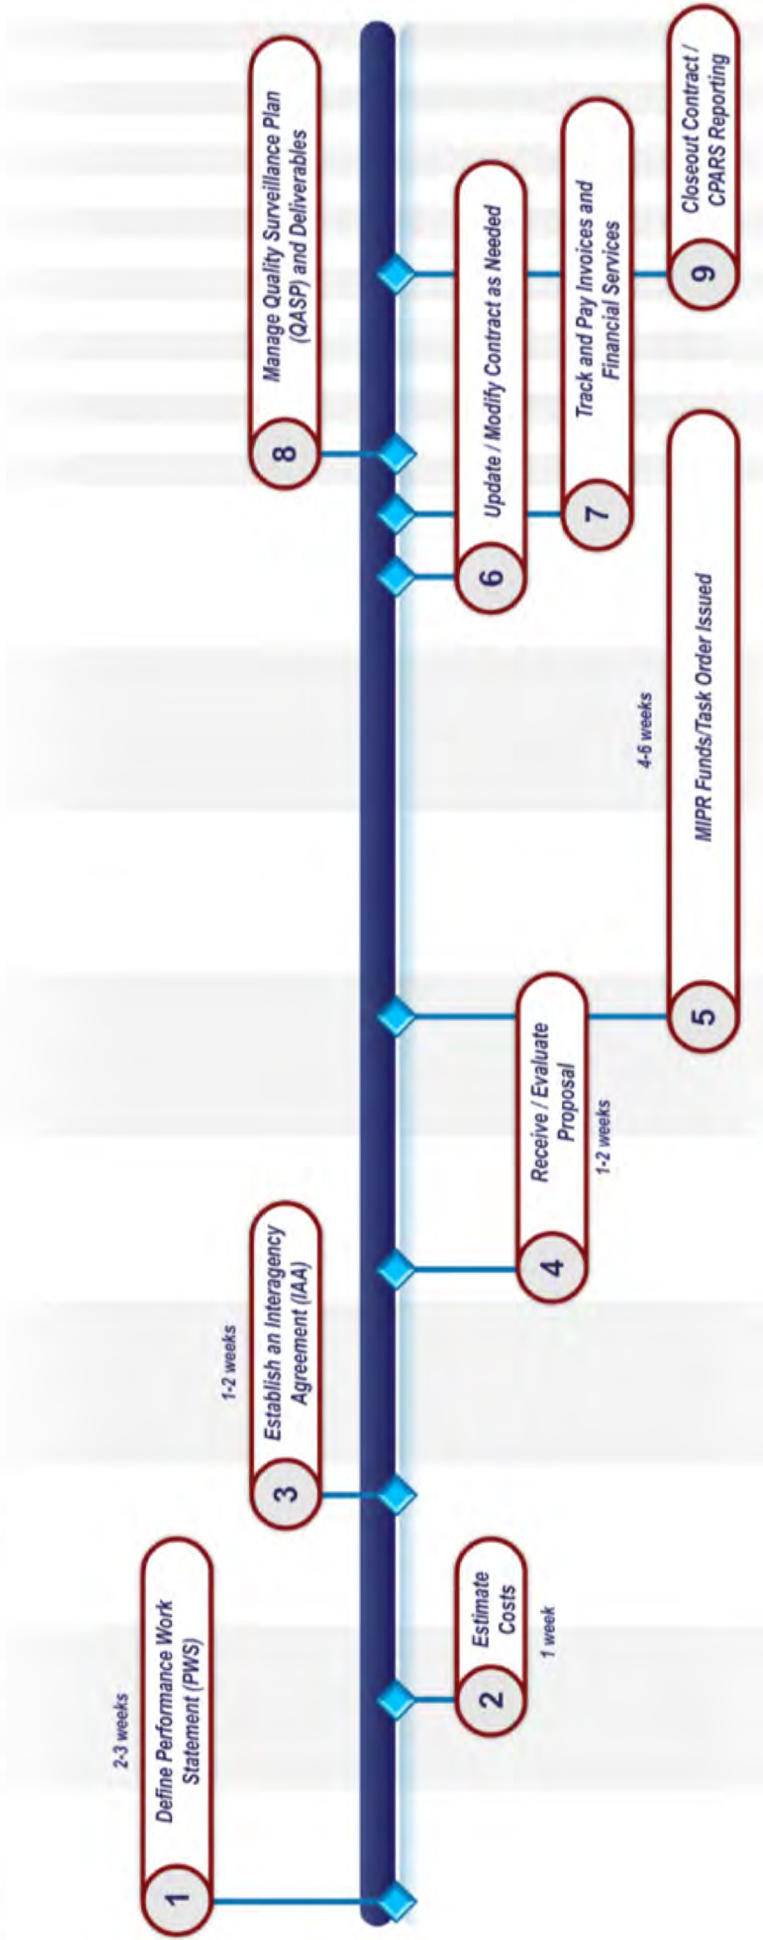

Training and educational content often requires custom development to ensure relevancy to the competency being trained. USALearning has a full spectrum of training development and support for multiple delivery modalities, which can be done in person or over the Internet. Some of our services include assessment design and delivery, organizational learning needs assessment, and executive coaching and mentoring.

OUR MISSION

PowerTrain, we'll ensure your complete satisfaction with our dynamic, expertly produced products and services. Large enough to be your strategic partner and small enough to be agile and dynamic, we turn your ideas and challenges into impactful performance solutions. Our clients receive unparalleled service and support in all that we do.

OUR VISION

We constantly strive for excellence in all the work we do with our partners to achieve results and make changes in the right direction, together

FedRAMP Security Services

- Implementation of over 750 DISA STIGs across all components
- NIST 800-53 controls fully implemented, documented and available for review
- FISMA compliant environment and controls
- Monthly penetration testing of web applications
- Monthly vulnerability scanning of all hosted servers
- Monthly non-automated analysis of all flaws identified during scanning
- Monthly submission to OPM Security Board and Federal FedRAMP Review Board
- Weekly OPM Security Board review meetings
- Full documented paper trail of all identified vulnerabilities from identification through remediation
- Robust user access control, all employees must pass security clearances, all access is documented, approved by security officials and monitored
- Quarterly account audits to verify account access needs and privilege requirements
- Full BOD 18-01 compliance and monitoring
- Daily server log reviews
- Annual FedRAMP security assessment by a third-party Assessment Organization (3PAO)
- Over 1000 pages of security documents maintained and updated annually
- Dozens of associated applications and services to better secure the infrastructure including Burp Suite, Nessus, AlienVault, Sophos, Crash Plan, Tenable, databases, virus scanning, firewall subscriptions, and others

Testimonials

"PowerTrain has been an excellent partner!" – OPM

"Exceeded our expectations in all aspects!" – DOL

"Quality of work is second to none!" – DOD

About Us: PowerTrain was founded in 1994 as a woman-owned small business. Since then, we have supported thousands of government and commercial clients on a wide variety of cloud-based IT, human capital, and training initiatives. In a rapidly evolving industry, in which adaptability and innovation are critical, we are proud to be celebrating 27+ years in the business.

How We Exceed Expectations: PowerTrain focuses on client satisfaction and exceeds requirements for organizations of all sizes. We are large enough to be your strategic partner and small enough to be agile and dynamic.

CAPABILITIES

Cloud-Based IT Solutions

- FedRAMP-Authorized Hosting, Help Desk Support
- System Integration
- Student Information Systems & Transcript Management
- COTS & Open-Source Solutions
- Learning Ecosystems
- Data Analytics & Metrics

- Learning Management Systems (LMS)
- Agile Solution Development
- Learning Record Stores (LRS)
- Cybersecurity Services
- Learning Content Management Systems (LCMS)
- Communities of Practice Development & Support

Learning and Development

- Section 508 Compliant eLearning, WBT, VILT, ILT, Micro, Blended Learning Solutions
- Instructional Systems Design (ISD) Services
- Game & App Design/Development
- SCORM, xAPI Implementation
- Training Needs Analysis, Assessment, & Evaluation
- Responsive Design Solutions

- Virtual Conferences, Webinars, Meeting Design & Implementation, Hiring Fairs
- HTML5, eAuthoring, Templates
- Training Program Management
- Curriculum Design & Development
- Flash to HTML5 Conversion
- Certification Testing, Tests, & Measurements

Production Services

- Website Design and Development
- Print-based Solutions (e.g., brochures, posters, table tents)
- User Experience/User Interface (UX/UI) Design & Optimization

- 2D/3D Graphic & Animation Development
- Strategic & Marketing Communications Development
- Audio and Video Production/Editing

Talent Management

- Onboarding
- Strategic Workforce Planning & Alignment
- Performance Management
- Knowledge Management
- Performance Metrics & Data Analysis
- Succession Management

- Executive Coaching & Individual or Teams Coaching

PowerTrain was founded in 1994 as a woman-owned small business. Since then, PowerTrain's team has supported thousands of Government and commercial clients on a wide variety of solutions.

In a rapidly evolving industry in which technological adaptability and innovation are critical, we are proud to be celebrating over 27 years in the business!

Cloud-Based IT

PowerTrain's agile, scalable solutions include learning management systems (LMSs), FedRAMP-authorized hosting, customer services, technical support, system integration, & learning ecosystems.

Learning & Development

We analyze, design, & develop highly interactive, customized, Section 508-compliant eLearning, instructor-led & hybrid training, animation, games, apps, & micro-learning solutions. Our virtual events, certification testing, & measurable evaluations ensure continuous performance improvement.

Talent Management

Our career-mapping services, competency assessment, executive coaching, organizational & individual performance analysis, strategic planning, & wide range of performance consulting services ensure effective growth & development.

Production Services

As a full-service company, we provide quality 2D/3D graphics & animation, audio & video editing & production, website design, & marketing communication materials.
