The image shows the exterior of the Icefield Centre, a multi-story building with a rustic yet modern aesthetic. The ground floor is finished with dark grey stone masonry. A balcony on the upper level features a dark metal railing and is supported by stone pillars. The building's roofline is accented with bright green trim, which also outlines the gables and eaves. The sky is clear and blue with a few wispy clouds.

Just as a doctor needs to know a patient's medical history to make a diagnosis, we need to understand the history of a forest to tell what is "healthy" for that forest.

All of the plants, animals and natural processes historically found in a forest are still present and functioning normally. These that forest is likely to stay healthy.

If some of these pieces are missing – or, if others are added that weren't there when the forest was evolving – that forest becomes unbalanced, supporting fewer species of plants, insects, mammals and birds.

Qu'est-ce qu'une forêt en santé?

Il est facile de penser que, si elle a beaucoup d'arbres, la forêt est en santé, mais cela n'est pas toujours le cas. Une forêt saine est une forêt qui a une grande diversité d'arbres, de plantes, d'animaux et de champignons. Une forêt saine est une forêt qui a une grande diversité d'habitats et qui est capable de résister aux perturbations naturelles.

Une forêt saine est une forêt qui a une grande diversité d'habitats et qui est capable de résister aux perturbations naturelles. Une forêt saine est une forêt qui a une grande diversité d'habitats et qui est capable de résister aux perturbations naturelles.

Débordement de santé

Les agents de perturbation naturelle perturbent la structure de nos forêts, qui sont des écosystèmes complexes et dynamiques.
