**Angle-Rite®
Fabricating
System**

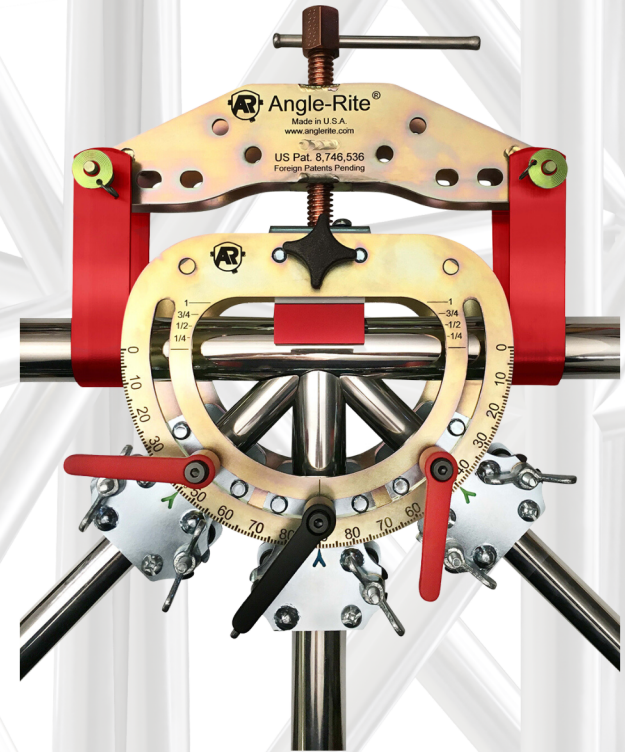

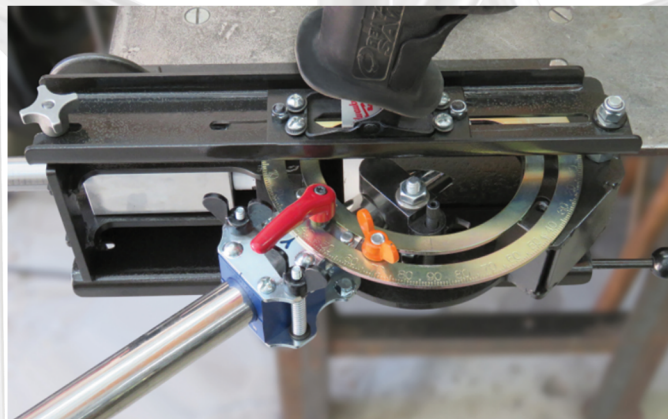

Fully Integrated Cutting System

Maximizes production and reduces waste.

Our fully integrated system locks in your lengths, angles, and tube rotation while the clamp locks the work-piece position and determines the cutting location for fast, repeatable setups and eliminates misalignment when notching both ends.

INNOVATIVE DESIGN

Higher Quality Accurate Builds

Angle-Rite® Clamp's patented weld distortion compensation reduces unwated flaws from weld distortion and sets a NEW higher standard.

**No more saying,
"Sorry, It's the best we can do."**

Increase Safety

Attempting to hold and tack weld joints on a free-standing structure can be frustrating and hazardous. One clamp can hold up to three intersections.*

**Meet your new
"Rite" hand man.**
